

PMC-53A

Intelligent Multifunction Meter

User Manual

Version: V1.3A

March 4, 2020

This manual may not be reproduced in whole or in part by any means without the express written permission from CET Inc. (CET).

The information contained in this manual is believed to be accurate at the time of publication; however, CET assumes no responsibility for any errors which may appear here and reserves the right to make changes without notice. Please consult CET or your local representative for the latest product specifications.

Standards Compliance

This symbol indicates the presence of danger that may result in severe injury or death and permanent equipment damage if proper precautions are not taken during the installation, operation or maintenance of the device.

This symbol indicates the potential of personal injury or equipment damage if proper precautions are not taken during the installation, operation or maintenance of the device.

DANGER

Failure to observe the following instructions may result in severe injury or death and/or equipment damage.

- Installation, operation and maintenance of the meter should only be performed by qualified, competent personnel that have the appropriate training and experience with high voltage and current devices. The meter must be installed in accordance with all local and national electrical codes.
- Ensure that all incoming AC power and other power sources are turned OFF before performing any work on the meter.
- Before connecting the meter to the power source, check the label on top of the meter to ensure that it is equipped with the appropriate power supply, and the correct voltage and current input specifications for your application.
- During normal operation of the meter, hazardous voltages are present on its terminal strips and throughout the connected potential transformers (PT) and current transformers (CT). PT and CT secondary circuits are capable of generating lethal voltages and currents with their primary circuits energized. Follow standard safety precautions while performing any installation or service work (i.e. removing PT fuses, shorting CT secondaries, ...etc).
- Do not use the meter for primary protection functions where failure of the device can cause fire, injury or death. The meter should only be used for shadow protection if needed.
- Under no circumstances should the meter be connected to a power source if it is damaged.
- To prevent potential fire or shock hazard, do not expose the meter to rain or moisture.
- Setup procedures must be performed only by qualified personnel familiar with the instrument and its associated electrical equipment.
- DO NOT open the instrument under any circumstances.

Limited warranty

- CET Inc. (CET) offers the customer a minimum of 12-month functional warranty on the meter for faulty parts or workmanship from the date of dispatch from the distributor. This warranty is on a return to factory for repair basis.
- CET does not accept liability for any damage caused by meter malfunctions. CET accepts no responsibility for the suitability of the meter to the application for which it was purchased.
- Failure to install, set up or operate the meter according to the instructions herein will void the warranty.
- Only CET's duly authorized representative may open your meter. The unit should only be opened in a fully anti-static environment. Failure to do so may damage the electronic components and will void the warranty.

Chapter 1 Introduction

This manual explains how to use the PMC-53A Intelligent Multifunction Meter. Throughout the manual the term “meter” generally refers to all models.

This chapter provides an overview of the PMC-53A meter and summarizes many of its key features.

1.1 Overview

The PMC-53A Intelligent Multifunction Meter is CET’s latest offer for the low-cost digital power/energy metering market. The PMC-53A features quality construction, multifunction measurements and a large, backlit, Dot-Matrix LCD that is easy to navigate. Housed in a standard DIN form factor measuring 96x96x88mm, it is perfectly suited for industrial, commercial and utility applications. Compliance with the IEC 62053-22 Class 0.5S Standard, it is a cost effective replacement for analog instrumentation and is capable of displaying 4 measurements at once. It optionally provides I₄ input for Neutral Current measurement, a second RS485 port, up to six Digital Inputs for status monitoring, pulse counting or Tariff switching, up to four Relay Outputs for control and alarming applications, up to four Solid State Relays for energy pulsing as well as other I/O options for different applications.

You can setup the meter through its front panel or via our free PMC Setup software. The meter is also supported by our PecStar® iEMS Integrated Energy Management System. Following is a list of typical applications for the PMC-53A:

- Industrial, Commercial and Utility Substation Metering
- Building, Factory and Process Automation
- Sub-metering and Cost Allocation
- Energy Management and Power Quality Monitoring

Contact CET Technical Support at support@cet-global.com should you require further assistance with your application.

1.2 Features

Ease of use

- Large, backlit, Dot-Matrix LCD display with wide viewing angle
- Intuitive user interface
- LED indicators for Energy Pulsing and Communication activities
- Password-protected setup via front panel or free PMC Setup software
- Easy installation with mounting clips, no tools required

Basic Measurements (True RMS)

- ULN, ULL per phase and Average
- Current per phase and Average with calculated Neutral
- kW, kvar, kVA, PF per phase and Total
- kWh, kvarh Import / Export / Net / Total and kVAh Total
- Frequency
- Device Operating Time (Running Hours)
- Optional I₄ measurements
- Calculated Residual Current I_r (with optional I₄ Input)

Advanced Measurements

- 1-Cycle Real-time U & I Waveform Display @ 1s update rate
- U and I THD, TOHD, TEHD and Individual Harmonics up to 31st
- Current TDD, TDD Odd, TDD Even, K-Factor and Crest Factor
- U and I Unbalance and Phase Angles
- Displacement PF
- Fundamental U, I and kW per phase
- Total Fundamental kW & Total Harmonic kW*
- U and I Symmetrical (Sequence) Components*
- kvarh Q1-Q4
- Interval Energy for kWh/kvarh Imp/Exp and kVAh
- Demands, Predicted Demands and Peak Demands for kW/kvar/kVA Total and per phase Current with Timestamp for This Month (or Since Last Reset) and Last Month (or Before Last Reset)
- Two TOU schedules, each providing
 - 12 Seasons
 - 20 Daily Profiles, each with 12 Periods in 15-minute interval
 - 90 Holidays or Alternate Days
 - 8 Tariffs, each providing the following information
 - kWh/kvarh Import/Export, kVAh
 - kW/kvar/kVA Max. Demands
- 12 Monthly Energy Logs of kWh/kvarh Import/Export/Total/Net, kVAh, kvarh Q1-Q4 as well as kWh/kvarh Import/Export and kVAh per Tariff

*Available in Firmware V1.00.03 or later

Setpoints

- 9 user programmable Setpoints with extensive list of monitoring parameters including Voltage, Current, Power and THD, ... etc.
- Configurable thresholds, time delays and DO triggers

SOE Log

- 100 events time-stamped to ±1ms resolution
- Recording events for Setup changes, Setpoint and DI status changes as well as DO operations

Max./Min. Log

- Max./Min. Log with timestamp for parameters such as Voltage, Current, In (calculated), I₄, I_r, Frequency, kW, kvar, kVA, PF, Unbalance, K-Factor, Crest-Factor and THD
- Configurable for This Month/Last Month or Since/Before Last Reset

Freeze Logs (Optional)

- 60 Daily Freeze Logs for kWh/kvarh/kVAh Total and kW/kvar/kVA Peak Demands.
- 36 Monthly Freeze Logs for kWh/kvarh/ kVAh Total and kW/kvar/kVA Peak Demands with Timestamp.

Data Recorder Log (Optional)

- 5 Data Recorders of 16 parameters each for real-time measurements, harmonics, energy, demand, TOU, Pulse Counters...etc.
- Recording interval from 1 minute to 40 days
- Configurable capacity up to a max. of 100 days at 15-minute interval

Diagnostics

- Frequency Out-of-Range, Loss of Voltage / Current
- kW Direction per phase and Total, Possible Incorrect CT Polarity
- Incorrect U & I Phase Sequence

Communications

- Optically isolated RS485 port at max. 38,400 bps
- Selectable Modbus RTU, BACnet MS/TP*, Metasys N2* and DNP 3.0~
- Optional 2nd RS485 port with Modbus RTU support only

*Available in Firmware V1.00.03 or later

~Available in Firmware V1.00.06 or later

Optional Inputs and Outputs

- **Digital Inputs**
 - Up to 6 channels, volts free dry contact, 24VDC internally wetted
 - 1000Hz sampling for status monitoring with programmable debounce
 - Pulse counting with programmable weight for each channel for collecting WAGES (Water, Air, Gas, Electricity, Steam) information
 - Tariff switching based on DI status
- **Digital Outputs**
 - Up to 4 Form A mechanical relays for alarming and general purpose control
- **Pulse Outputs**
 - Up to 4 Form A Solid State Relays for kWh and kvarh pulsing with Max. Load Voltage @ 50VDC and Max. Forward Current @ 50mA

Optional Expansion Modules

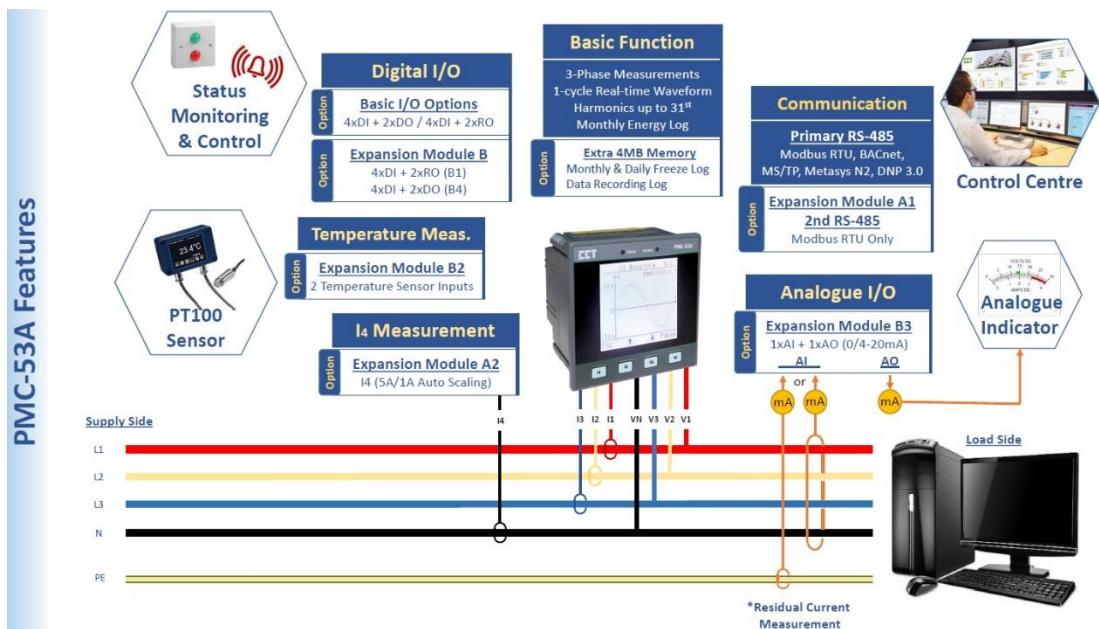

- **Expansion Module A Options**
 - 1x Input
 - 2nd RS485 port with optical isolation, supporting Modbus RTU
- **Expansion Module B Options**
 - 2xDigital Inputs and 2xRelay Outputs
 - 2xDigital Inputs and 2xSolid State Pulse Outputs
 - 2xRTD Inputs (PT100 sensor not included)
 - 1xAI and 1xAO (0/4-20mA)

System Integration

- Supported by CET's PecStar® iEMS and iEEM
- Modbus RTU for easy integration into 3rd-party Energy Management, Automation or SCADA systems
- BACnet MSTP and Metasys N2 for Building Automation
- DNP 3.0 for Utility Substation Automation

1.3 PMC-53A' application in Power and Energy Management Systems

The PMC-53A can be used to monitor 4P3W (Wye), 3P3W (Delta), 1P2W-Uln, 1P2W-Ull or 1P3W connected power system. Modbus communications allow real-time data, DI status and other information to be transmitted across a RS485 network to an Integrated Energy Management system such as PecStar® iEMS.

1.4 Getting more information

Additional information is available from CET via the following sources:

- Visit www.cet-global.com
- Contact your local representative
- Contact CET Technical Support directly via email at support@cet-global.com

Chapter 2 Installation

Caution

Installation of the PMC-53A should only be performed by qualified, competent personnel that have the appropriate training and experience with high voltage and current devices. The meter must be installed in accordance with all local and national electrical codes.

During the operation of the meter, hazardous voltages are present at the input terminals. Failure to observe precautions can result in serious or even fatal injury and equipment damage.

2.1 Appearance

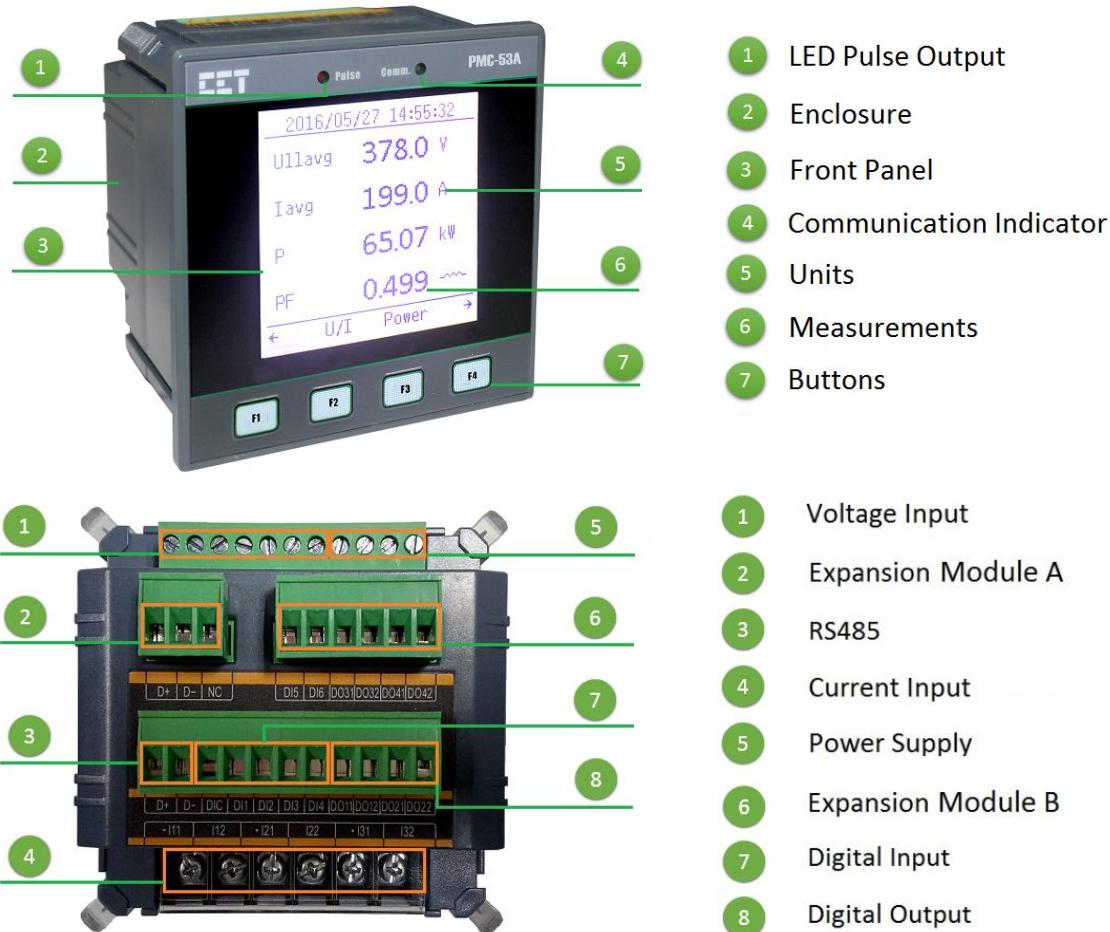

Figure 2-1 Appearance

2.2 Unit Dimensions

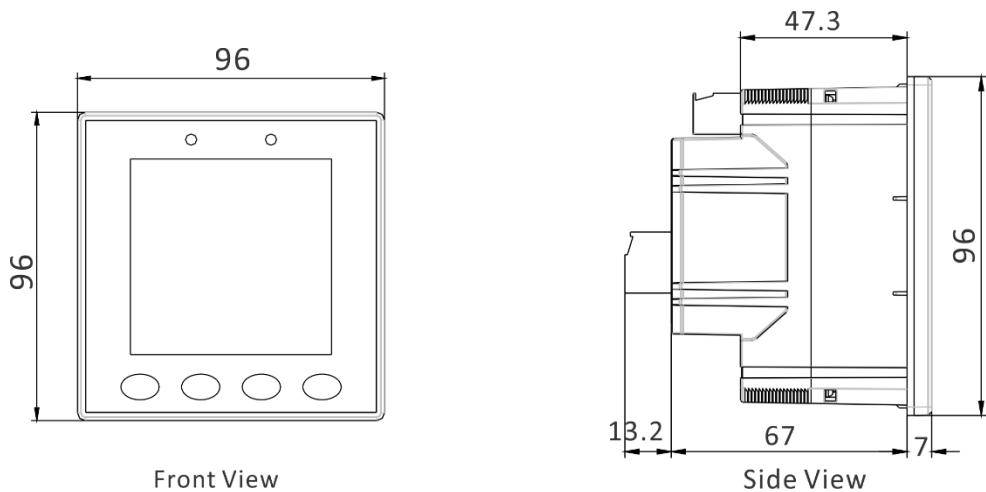

Figure 2-2 Unit Dimensions

2.3 Terminal Dimensions

Figure 2-3 Terminal Dimensions

	Terminal	Terminal Dimensions	Wire Size	Max. Torque
1	Voltage Input	2.6mm x 3.2mm	1.5mm ²	5 kgf.cm/M3 (5 lb-in)
	Power Supply			
2	Expansion Module A & B	2.6mm x 3.2mm	1.5mm ²	5 kgf.cm/M3 (5 lb-in)
	RS485			
	DI			
	DO			
3	Current Input	6.5mm x 6.5mm	1.0mm ² - 2.5mm ² (14AWG - 22AWG)	6.0 kgf.cm/M3 (12 lb-in)

Table 2-1 Terminal Dimensions

2.4 Mounting

The PMC-53A should be installed in a dry environment with no dust and kept away from heat, radiation and electrical noise source.

Installation steps:

- Remove the installation clips from the meter
- Fit the meter through a 92mmx92mm cutout as shown in Figure 2-4
- Re-install the installation clips and push the clips tightly against the panel to secure the meter

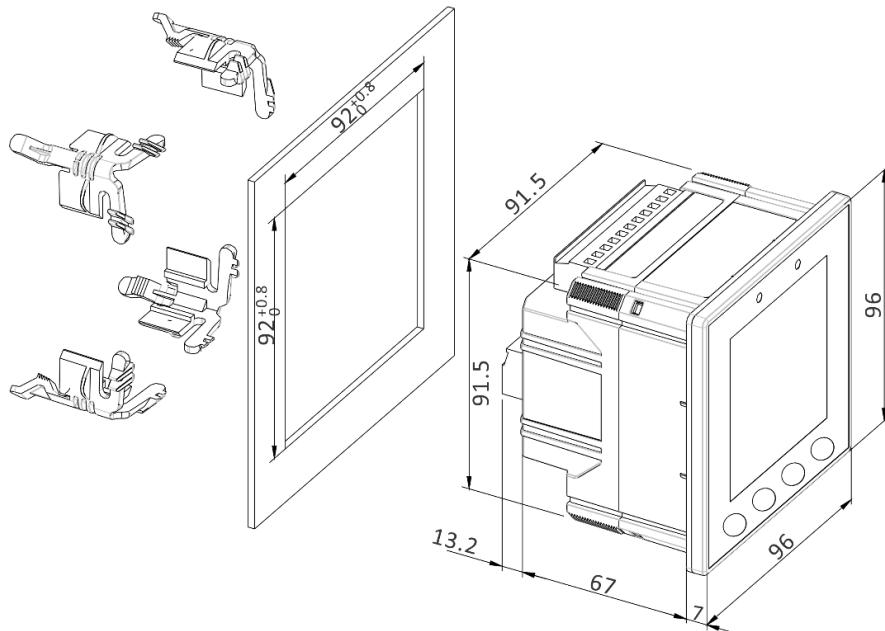

Figure 2-4 Panel Cutout Mounting

2.5 Wiring connections

PMC-53A can satisfy almost any three phase power systems. Please read this section carefully before installation and choose the correct wiring method for your power system. The following Wiring Modes are supported:

- 3-Phase 4-Wire (3P4W) Wye Direct Connection with 3CTs
- 3-Phase 4-Wire (3P4W) Wye Direct Connection with 4CTs
- 3-Phase 4-Wire (3P4W) Wye with 3PTs and 3CTs
- 3-Phase 4-Wire (3P4W) Wye with 3PTs and 4CTs
- 3-Phase 3-Wire (3P3W) Direct Delta Connection With 3CTs
- 3-Phase 3-Wire (3P3W) Direct Delta Connection with 2CTs
- 3-Phase 3-Wire (3P3W) Delta with 2PTs and 3CTs
- 3-Phase 3-Wire (3P3W) Delta with 2PTs and 2CTs
- 1-Phase 3-Wire (1P3W) Direct Connection with 2CTs
- 1-Phase 2-Wire, Uln (1P2W-Uln) Direct Connection with 1CT
- 1-Phase 2-Wire, Ull (1P2W-Ull) Direct Connection with 1CT

Caution

Under no circumstances should the PT secondary be shorted.

Under no circumstances should the CT secondary be open when the CT primary is energized. CT shorting blocks should be installed to allow for easy maintenance.

2.5.1 3-Phase 4-Wire (3P4W) Wye Direct Connection with 3CTs

Please consult the serial number label to ensure that the rated system phase voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **3P4W**.

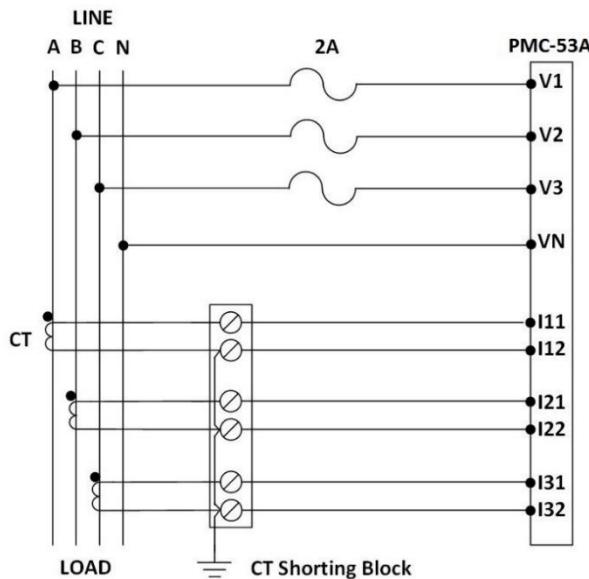

Figure 2-5 3P4W Direct Connection with 3CTs

2.5.2 3-Phase 4-Wire (3P4W) Wye Direct Connection with 4CTs

Please consult the serial number label to ensure that the rated system phase voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **3P4W**

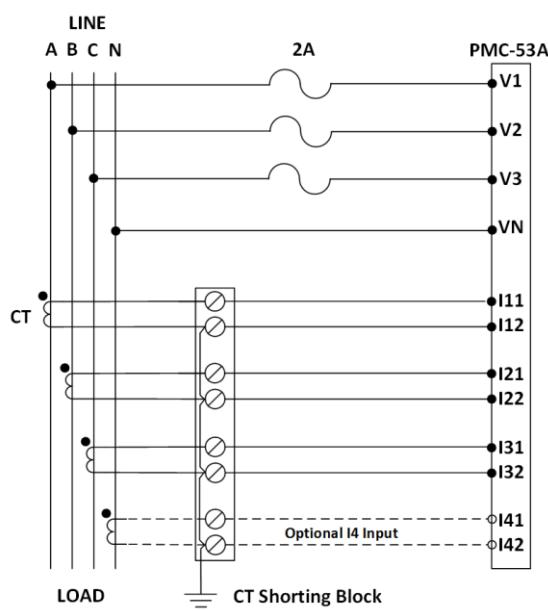

Figure 2-6 3P4W Direct Connection with 4CTs (Optional I41 & I42)

2.5.3 3-Phase 4-Wire (3P4W) Wye with 3PTs and 3CTs

Please consult the serial number label to ensure that the rated PT secondary voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **3P4W**.

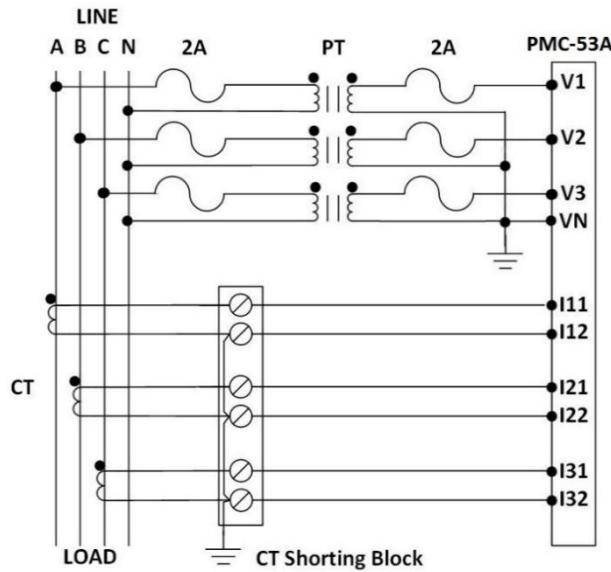

Figure 2-7 3P4W with 3PTs and 3CTs

2.5.4 3-Phase 4-Wire (3P4W) Wye with 3PTs and 4CTs

Please consult the serial number label to ensure that the rated PT secondary voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **3P4W**.

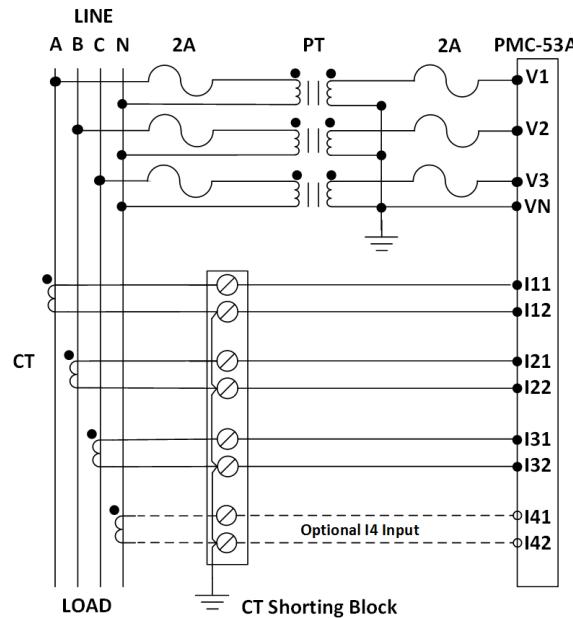

Figure 2-8 3P4W with 3PTs and 4CTs (Optional I41 & I42)

2.5.5 3-Phase 3-Wire (3P3W) Direct Delta Connection with 3CTs

Please consult the serial number label to ensure that the rated system line voltage is less than or equal to the meter's rated line voltage input specification. Set the **Wiring Mode** to **3P3W**.

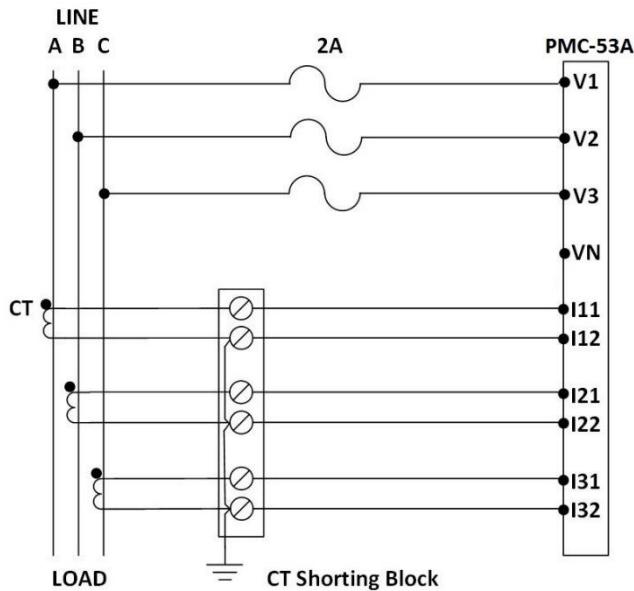

Figure 2-9 3P3W Direct Connection with 3CTs

2.5.6 3-Phase 3-Wire (3P3W) Direct Delta Connection with 2CTs

Please consult the serial number label to ensure that the rated system line voltage is less than or equal to the meter's rated line voltage input specification. Set the **Wiring Mode** to **3P3W**.

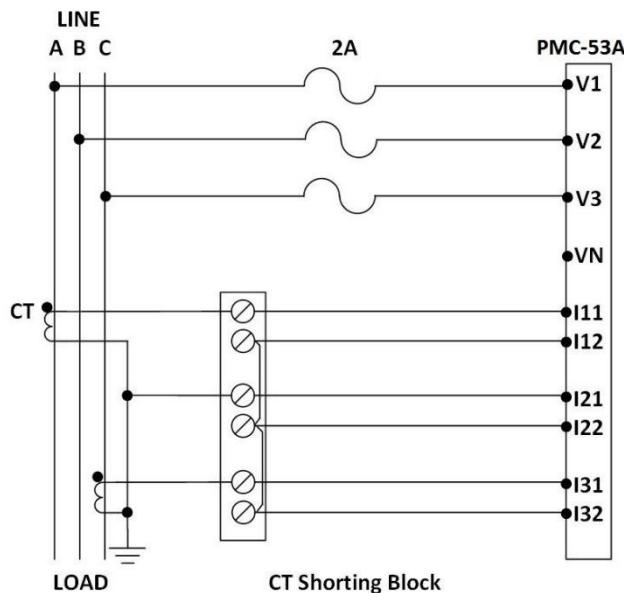

Figure 2-10 3P3W Direct Connection with 2CTs

2.5.7 3-Phase 3-Wire (3P3W) Delta with 2PTs and 3CTs

Please consult the serial number label to ensure that the rated PT secondary voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **3P3W**.

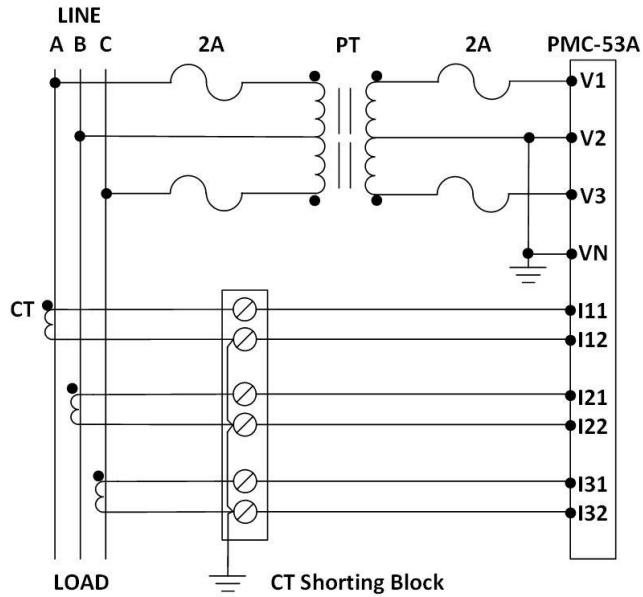

Figure 2-11 3P3W Delta with 2PTs and 3CTs

2.5.8 3-Phase 3-Wire (3P3W) Delta with 2PTs and 2CTs

Please consult the Serial Number Label to ensure that the rated PT secondary voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **3P3W**.

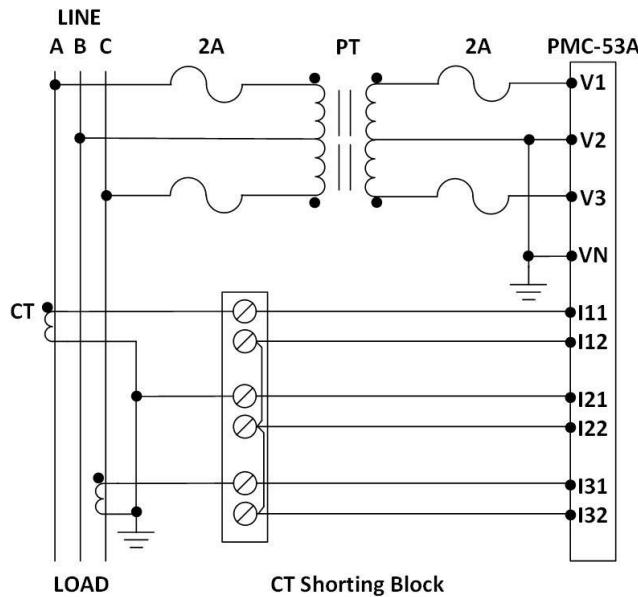

Figure 2-12 3P3W Delta with 2PTs and 2CTs

2.5.9 1-Phase 3-Wire (1P3W) Direct Connection with 2CTs

Please consult the Serial Number Label to ensure that the rated system phase voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **1P3W**.

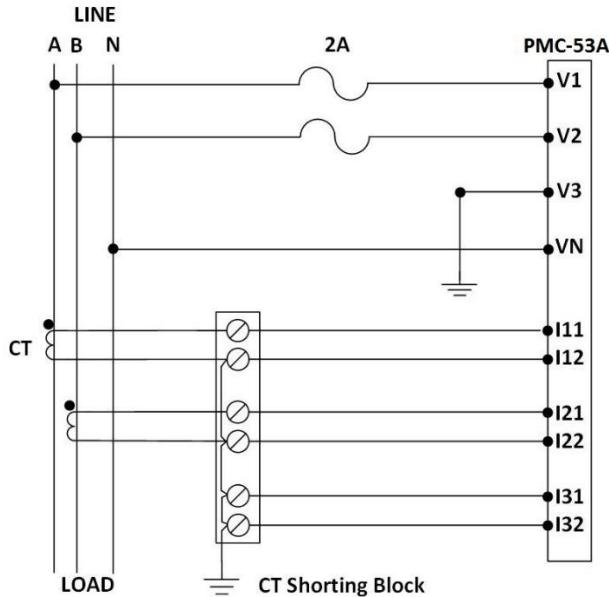

Figure 2-13 1P3W Direct Connection with 2CTs

2.5.10 1-Phase 2-Wire, Uln (1P2W-Uln) Direct Connection with 1CT

Please consult the Serial Number Label to ensure that the rated system phase voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **1P2W, L-N**.

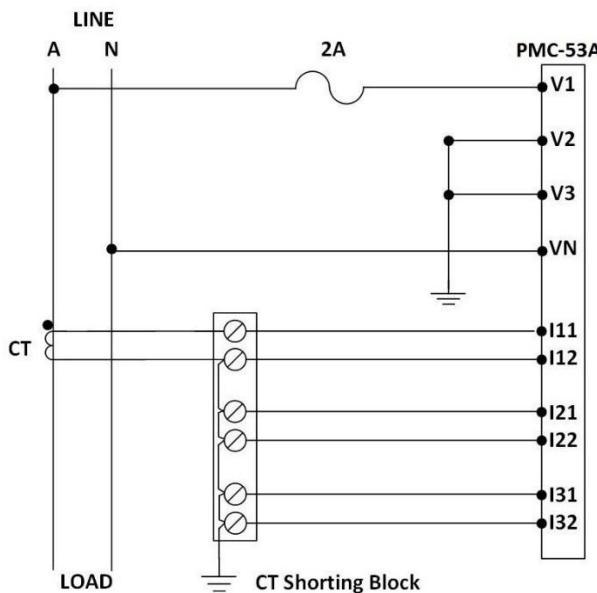

Figure 2-14 1P2W Uln Direct Connection with 1CT

2.5.11 1-Phase 2-Wire, Ull (1P2W-Ull) Direct Connection with 1CT

Please consult the Serial Number Label to ensure that the rated system line voltage is less than or equal to the meter's rated phase voltage input specification. Set the **Wiring Mode** to **1P2W, L-L**.

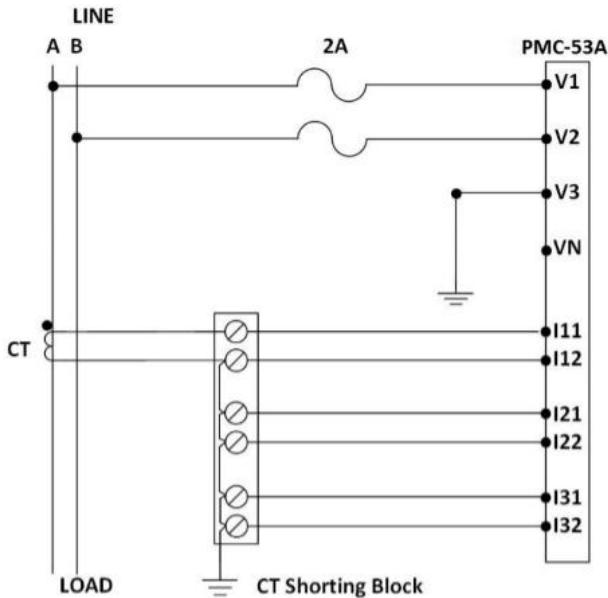

Figure 2-15 1P2W Ull Direct Connection with 1CT

2.6 Communications Wiring

The following figure illustrates the RS485 communications connections on the PMC-53A:

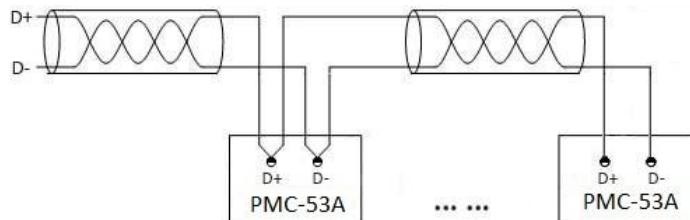

Figure 2-14 Communications Connections

The PMC-53A provides one standard RS485 port and one optional RS485. Up to 32 devices can be connected on a RS485 bus. The overall length of the RS485 cable connecting all devices should not exceed 1200m.

If the master station does not have a RS485 communications port, a RS232/RS485, USB/RS485 or Ethernet/RS485 converter with optically isolated output and surge protection should be used.

2.7 Digital or Pulse Input Wiring

The following figure illustrates the Digital Input connections on the PMC-53A:

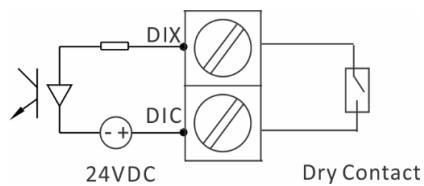

Figure 2-16 DI Connections

2.8 Digital (Relay) Output Wiring

The following figures illustrate the Digital (Relay) Output connections on the PMC-53A:

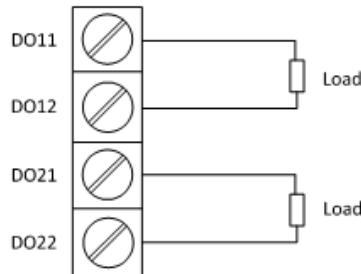

Figure 2-17 DO Connections

2.9 Pulse Output Wiring

The following figure illustrates the Pulse Output connections on the PMC-53A when the **DO Control Mode** setup register is programmed for Energy Pulsing:

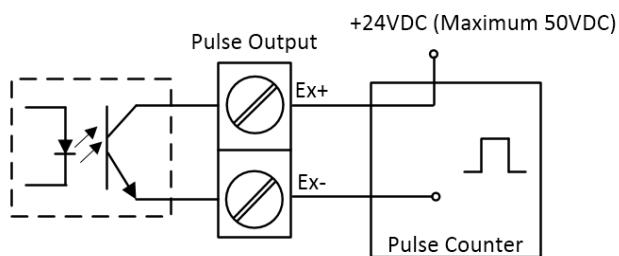

Figure 2-18 Pulse Output (Solid State Relay) Connections for Energy Pulsing

The following figure illustrates the Pulse Output (Solid State Relay) connections on the PMC-53A when the **DO Control Mode** setup register is programmed for Remote Control/Alarm:

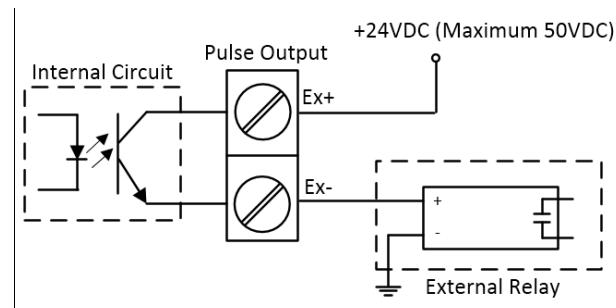

Figure 2-19 Pulse Output (Solid State Relay) Connections for Remote Control/Alarm

2.10 Analog Input Wiring

The following figure illustrates the Analog Input connections on the PMC-53A:

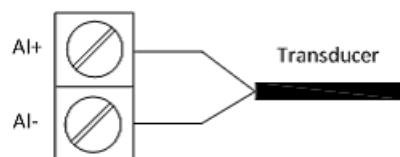

Figure 2-20 AI Connections

Figure 2-21 AO Connections

2.12 RTD Input Wiring

The following figure illustrates the RTD Input connections on the PMC-53A:

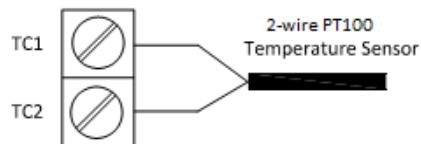

Figure 2-22 RTD Input Connections

2.13 Power Supply Wiring

For AC supply, connect the live wire to the L/+ terminal and the neutral wire to the N/- terminal.

For DC supply, connect the positive wire to the L/+ terminal and the negative wire to the N/- terminal.

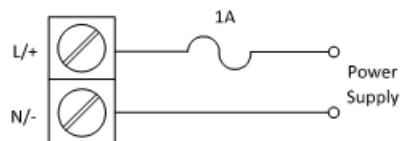

Figure 2-23 Power Supply Connections

Chapter 3 Front Panel

The PMC-53A has a large, easy to read Dot-Matrix LCD display with backlight and four buttons for data display and meter configuration. This chapter introduces the front panel operations.

Figure 3-1 Front Panel

3.1 Using the Front Panel Buttons

The PMC-53A's front panel has been designed with a menu-driven interface that is extremely user friendly such that all one has to do is to simply follow the menu at the bottom of the screen. The button definitions for F1 to F4 under **Display Mode** and **Setup Mode** are explained in the following table. **The default password is 0000 (four zeros).**

	Display Mode		Setup Mode					
Button	Main Menu	Sub Menus	Password Page	Enter Password	Browse/Setup Menu (Until a parameter is selected)	Enumerated Parameter	Numeric Parameter	
F1	← (Menu Left)	Esc (Exit)	Esc (Exit)	Cancel (Exit)	Esc (Exit)	Cancel (Exit)	Cancel (Exit)	
F2	Select Option	↑ (Page Up) or Select Option	Browse (View Only)	← (Shift Left)	↑ (Cursor Up)	← (Previous)	← (Shift Left)	
F3	Select Option	↓ (Page Down) or Select Option	Null (Not Used)	↑ (Increment)	↓ (Cursor Down)	↑ (Next)	↑ (Increment)	
F4	→ (Menu Right)	→ (Menu Right) or Select Option or Null (Not Used)	Enter (Confirm)	OK (Confirm)	Enter (Select Parameter)	OK (Confirm)	OK (Confirm)	

Table 3-1 Button Function

3.2 Data Display

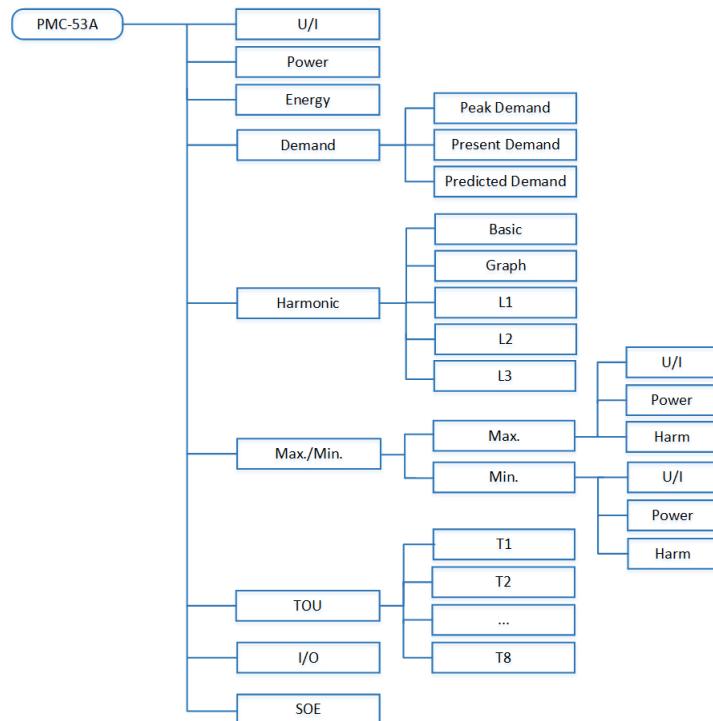

Figure 3-2 Data Display Menu

Throughout this document, the phase-to-neutral notations of A/B/C and L1/L2/L3 as well as the phase-to-phase notations of AB/BC/CA and L12/L23/L31 may be used interchangeably for specifying a certain parameter to be a phase-to-neutral or phase-to-phase value, respectively.

The following sections illustrate the available measurements for each display option. Depending on the **Wiring Mode** selected, certain measurements may not be available. For example, the per-phase UIn, UIn Average, I4, per-phase kW, kvar, kVA and PF measurements are not available when the **Wiring Mode** is set to 3P3W or 1P2W L-L.

3.2.1 U/I

Press Button	Display Screens	1 st Row	2 nd Row	3 rd Row	4 th Row
<U/I>	Default	Ull avg	I avg	kW Total	PF Total
	Display 1 (Volts L-N)	U1	U2	U3	UIn avg
	Display 2 (Volts L-L)	U12	U23	U31	Ull avg

Table 3-2 U/I Display

Notes:

- 1) The I4 parameter only appears if the meter is equipped with the corresponding I4 option.
- 2) The Ir parameter only shows a valid value when the **Wiring Mode** is set to **3P3W** or **3P4W**; otherwise, it shows "0".
- 3) For U/I Fundamental:
 - $U_1 = U_{an}$, $U_2 = U_{bn}$, $U_3 = U_{cn}$ in **3P4W** mode
 - $U_1 = U_{ab}$, $U_2 = U_{bc}$, $U_3 = U_{ca}$ in **3P3W** mode
 - $I_1 = I_a$, $I_2 = I_b$, $I_3 = I_c$

- 5) This display only appears if the meter is equipped with the RTD option.

3.2.9 SOE

The PMC-53A with Firmware V1.00.03 or later supports the display of the SOE Log with up to 100 Events (2 Events per page) such as I/O Changes, Setpoint, ...etc, on the Front Panel. In addition, the SOE Log can be reset from the Front Panel.

Examples of Event Log Display:

SOE	01/50	SOE	02/50	SOE	03/50
01. Over Current Setpoint	Active 2016/10/28 13:34:08:890 Value: 99.43 A	03. Over Ull Setpoint	Active 2016/10/28 13:34:08:890 Value: 217.8 V	05. DI6 Active	2016/10/28 11:38:00:316

Figure 3-3 SOE Log Displays

3.3 Setup Configuration via the Front Panel

Pressing <←>/<F1> or <→>/<F2> to scroll the menu at the bottom until <Setup> appears and then press the button associated with <Setup> to browse or change the setup parameters.

3.3.1 Making Setup Changes

1) Entering the Password:

- Press <Setup> to enter the **Setup Mode**.
- Press <F4>/<Enter> to advance to the **Password** page.
- A correct password must be entered before changes are allowed. The factory default password is “0000”.
- Press <F2>/<←> to shift the cursor to the left or <F3>/<↑> to increment the numeric value for the password.

- When the password has been entered, pressing **<F4>/<OK>** will advance to the setup menu if the password is correct.

2) Selecting a parameter to change:

- Press **<F2>/<↑>** or **<F3>/<↓>** to scroll to the desired sub-menu or parameter.
- Press **<F4>/<Enter>** to select the sub-menu or parameter.
- Repeat the step 2 until a setup parameter has been selected.

3) Changing and saving a setup parameter:

- For a Numeric parameter, press **<F2>/<↔>** to shift the cursor to the left or **<F3>/<↑>** to increment the numeric value
- For an Enumerated parameter, press **<F2>/<↔>** or **<F3>/<↑>** to scroll backward and forward in the selection list.
- After modification, press **<F4>/<OK>** to save the change into memory or **<Cancel>** to exit the currently selected parameter without change.
- Repeat step 3) until all setup parameters have been changed.

4) Exiting the Setup Mode

- Press **<F1>/<Esc>** to return to the **Display Mode**.
- Also, the **Setup Mode** will be automatically exited if there is a period of inactivity of 1 minute or longer.

3.3.2 Setup Menu

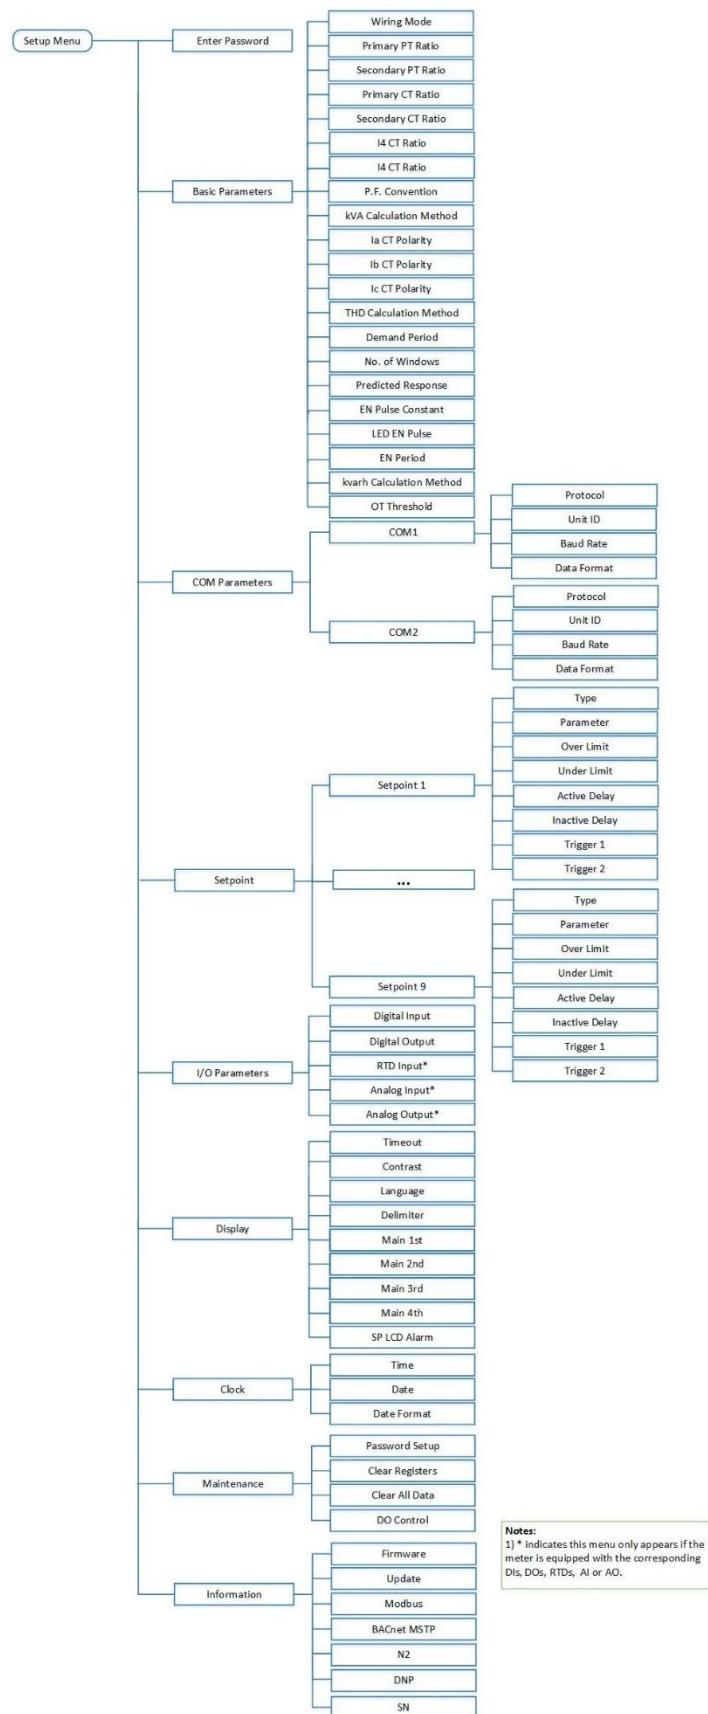

Figure 3-3 Setup Menu

3.3.3 Configuration

The Setup Configuration mode provides access to the following setup parameters:

Label		Description	Range	Default

Table 3-11 Setpoint Parameters

- 2) The table below illustrates the options for Setpoint Trigger.

Key	Action	Key	Action
0	None	3	DO3 Closed
1	DO1 Closed	4	DO4 Closed
2	DO2 Closed	Others	Reserved

Table 3-12 Setpoint Trigger

- 3) This menu only appears if the meter is equipped with the corresponding options.
- 4) **Tariff Switching** is available in Firmware V1.00.03 or later and only valid for DI1 to DI3.
- 5) Please refer to Chapter 4.1.6 for a detailed description of RTD Compensation.
- 6) Analog Output Parameters
If **PF Total** or **Freq** is chosen as the AO parameter, the values for **ZERO** (zero scale) and **FULL** (full scale) should be set as 1000 or 100 times the actual value, respectively. The Units for Voltage, Current, kW, kvar, kVA and FREQ are V, A, kW, kvar, kVA and Hz, respectively.

Key	Parameter	Scale	Unit	Key	Parameter	Scale	Unit
0	Uab		V	10	kVA Total	x1	kVA
1	Ubc		V	11	PF Total	x1000	-
2	Uca		V	12	Frequency	x100	-

4	Ia		A	14	kvar Total Present Demand	x1	kvar
5	Ib		A	15	kVA Total Present Demand		kVA
6	Ic		A	16	Uan		V
7	I Average		A	17	Ubn	x1	V
8	kW Total	x1	kW	18	Ucn		V
9	kvar Total		kvar	19	Uln Average		V

Table 3-13 Analog Output Parameters

- 7) The Delimiter setup register supports two options, 1 and 2:
 Option 1: “,” is used as the x1000 delimiter and “.” as the decimal point (e.g. 123,456,789.0).
 Option 2: “ ” is used as the x1000 delimiter and “,” as the decimal point (e.g. 123 456 789,0).
- 8) The following table illustrates the parameters that can be selected for display in the **Default Display** screen.

Key	Parameters	Key	Parameters	Key	Parameters	Key	Parameters
0	U1 (Uan)	10	I3 (Ic)	20	T1 kWh Imp	30	Fund. kW Total*
1	U2 (Ubn)	11	Iavg	21	T2 kWh Imp	31	dPF Total*
2	U3 (Ucn)	12	P (kW Total)	22	T3 kWh Imp	32	I4*
3	Ulnavg	13	Q (kvar Total)	23	T4 kWh Imp	33	U1 THD*
4	U12 (Uab)	14	S (kVA Total)	24	I1 (Ia) Demand	34	U2 THD*
5	U23 (Ubc)	15	PF (PF Total)	25	I2 (Ib) Demand	35	U3 THD*
6	U31 (Uca)	16	Frequency	26	I3 (Ic) Demand	36	Ir*
7	Ullavg	17	kWh Import	27	kW Demand		
8	I1 (Ia)	18	kWh Export	28	kvar Demand*		
9	I2 (Ib)	19	kWh Total	29	kVA Demand*		

* Available in Firmware V1.00.06 or later

Table 3-14 Default Display Parameters

- 9) Setting **SP LCD Alarm** to **On** would make the LCD blink when there is an active Setpoint alarm, and pressing any button would jump to the first SOE log screen.
- 10) Select **Present** to clear 3-Phase Total Energy registers, Phase A/B/C Energy registers, Tariff Energy and Monthly Energy Log of the Present Month.
- 11) Select **History** to clear the Monthly Energy Log of the last 1 to 12 months, excluding the Monthly Energy Log for the Present Month.

Chapter 4 Applications

4.1 Inputs and Outputs

4.1.1 Digital Inputs

The PMC-53A comes optionally with four or six self-excited Digital Inputs that are internally wetted at 24 VDC with a sampling frequency of 1000Hz and programmable debounce. The PMC-53A provides the following programmable functions for its digital inputs:

- 1) **Digital Input** The digital inputs are typically used for status monitoring which can help prevent equipment damage, improve maintenance, and track security breaches. The real-time statuses of the Digital Inputs are available on the front panel LCD Display as well as through communications. Changes in Digital Input status are stored as events in the SOE Log in 1 ms resolution.
- 2) **Pulse Counting** Pulse counting is supported with programmable pulse weight and facilitates WAGES (Water, Air, Gas, Electricity and Steam) information collection.
- 3) **Tariff Switching** Up to 3 Digital Inputs may be used to select to which of the 8 Tariffs the energy consumption should be accumulated. The 3 Digital Inputs (DI1, DI2 and DI3) represent 3 binary digits where Tariff 1=000, Tariff 2=001, ..., Tariff 8=111 where DI1 represents the least significant digit and DI3 represents the most significant digit. The **DI1 Function** setup register must first be programmed as a **Tariff Switch** before configuring DI2 with the same function. In other words, if DI1 is configured as a **Digital Input** or **Energy Pulse Counter** and DI2 is configured as a **Tariff Switch**, the TOU will continue to function based on the TOU Schedule. This feature is available in Firmware V1.00.03 or later.

The following table describes the DI's setup parameters:

Setup Parameter	Definition	Options
DIx Function	Each DI can be configured as a Digital Input or Pulse Counter. Only DI1 to DI3 can be set as Tariff Switch .	0=Digital Input* 1=Pulse Counter 2=Tariff Switch
DIx Debounce	Specifies the minimum duration the DI must remain in the Active or Inactive state before a state change is considered to be valid.	1 to 1000 (ms) (Default=20ms)
DIx Pulse Weight	Specifies the incremental value for each received pulse. This is only used when a DI is configured as a Pulse Counter.	1* to 1,000,000

Default*

Table 4-1 DI Setup Parameters

4.1.2 Digital Outputs

The PMC-53A comes optionally with two or four Form A Electrometrical Relays or Solid State Relays. Digital Outputs are normally used for setpoint alarming, load control, or remote control applications.

Digital Outputs on the PMC-53A can be used in the following applications:

- | | |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 1) Front Panel Control | Manually operated from the front panel. Please refer to the DO Control setup parameter in Section 3.3.3 for a detailed description. |
| 2) Remote Control | Remotely operated over communications via our free PMC Setup software or PecStar® iEMS Integrated Energy Management System. |
| 3) Control Setpoint | Control Setpoints can be programmed to trigger DO action upon becoming active. Please refer to Section 4.4 for a detailed description. |

Since there are multiple ways to trigger the Digital Outputs on the PMC-53A, a prioritized scheme has been developed to avoid conflicts between different applications. In general, Front Panel Control has the highest priority and can override other control schemes. Remote Control and Control Setpoint share the same priority, meaning that they can all be programmed to control the same Digital Output. This scheme is equivalent to having an implicit Logical OR operation for the control of a Digital Output and may be useful in providing a generic alarm output signal. However, the sharing of a Digital Output is not recommended if the user intends to generate a control signal in response to a specific setpoint condition.

4.1.3 Energy Pulse Outputs

The PMC-53A comes standard with one front panel LED Pulse Output for energy pulsing and can be equipped with two or four optional Solid State Relay Outputs for kWh and kvarh pulsing. Energy Pulse Outputs are typically used for accuracy testing. Energy Pulsing via the front panel LED can be enabled from the front panel through the **LED EN Pulse** setup parameter. The pulse constant can be configured as 1000/3200 pulses per kWh or kvarh through the **EN Pulse CNST** setup parameter.

4.1.4 Analog Input

The PMC-53A comes optionally with an Analog Input which can be programmed as 0mA to 20mA or 4mA to 20mA input. There are 3 setup parameters:

- Type:** Select between 0-20mA or 4-20mA input.
- AI Zero:** This value corresponds to the minimum Analog Input of 4 mA (for 4-20mA input) and has a range of -999,999 to +999,999.
- AI Full:** This value corresponds to the maximum Analog Input of 20 mA and has a range of -999,999 to +999,999.

For example, to measure the oil temperature of a transformer, connect the outputs of the temperature sensor to the AI terminals of the PMC-53A. The temperature sensor outputs 4mA when the temperature is -25°C and 20mA when the temperature is 100°C. As such, the **Type** parameter should be programmed as **4-20mA**. The **AI FULL** parameter should be programmed with the value 100, and the **AI ZERO** parameter should be programmed with the value -25. Therefore, when the output of the sensor is 20mA, the reading will be 100.00°C. When the output is 4mA, the reading will be -25.00°C. When the output is 12mA, the reading will be $(100^{\circ}\text{C} - (-25^{\circ}\text{C})) \times (12\text{mA}-4\text{mA}) / (20\text{mA}-4\text{mA}) + (-25^{\circ}\text{C}) = 37.50^{\circ}\text{C}$.

4.1.5 Analog Output

The PMC-53A comes optionally with one Analog Output which can be programmed as 0mA to 20mA or 4mA to 20mA output.

There are 4 setup parameters:

Type: Select between 0-20mA or 4-20mA output.

AO Zero: Defines the zero scale value of the parameter when the Analog Output is 0 or 4 mA according to the **AO Type**. The value ranges between -999,999 to +999,999.

AO Full: Defines the full scale value of the parameter when the Analog Output is 20 mA. The value ranges between -999,999 and +999,999.

Key: Defines the parameter to which the Analog Output is proportional. The Analog Output Parameters are listed in Table 3-13.

For example, an AO of 4-20mA is required to be proportional to Phase A current. The maximum value of phase A current is 2000A, and the minimum value is 500A. As such, the **Type** parameter should be programmed as **4-20mA**. The **Key** parameter should be programmed with Ia (Phase A Current). The **AO FULL** parameter should be programmed with the value 2000. The **AO ZERO** parameter should be programmed with the value 500. Therefore, when Phase A Current is 500A or below, The AO output is 4mA. When Phase A Current is 2000A, the AO output is 20mA. When Phase A Current is 1250A, the AO is $(1250A-500A) \times (20mA-4mA) / (2000A-500A) + 4mA = 12.00$ (mA).

4.1.6 RTD Input

The PMC-53A optionally provides two RTD Inputs for temperature measurements. The PT100 sensors are optional and not included. The 2-wire outputs of the PT100 sensor are connected to the RTD Input of the PMC-53A if so equipped. The PMC-53A can provide accurate temperature monitoring with the optional RTD inputs for measuring the temperature of the Neutral Conductor, Transformer or other equipment. There is a RTD Compensation register for each channel which can be used to compensate the measurement accuracy, and the compensation can be set according to formula:

$$\text{RTD Compensation} = 0.29 \times L \quad \text{where } L \leq 8 \text{ is the PT100 sensor's cable length in m}$$

4.2 Power and Energy

4.2.1 Basic Measurements

The PMC-53A provides the following basic measurements which are available through the Front Panel or communications.

Parameter	Phase A	Phase B	Phase C	Total	Average
UIn	●	●	●	-	●
UII	●	●	●	-	●
Current	●	●	●	-	●
Neutral Current	-	-	-	In (Calculated)	I4 (Optional)
Residual Current~	-	-	-	Ir~	-
kW	●	●	●	●	-
kvar	●	●	●	●	-
kVA	●	●	●	●	-
Power Factor	●	●	●	●	-
Frequency	●	-	-	-	-
U Fundamental*	●	●	●	-	-
I Fundamental*	●	●	●	-	-
U Sequence*	U1 (Positive Sequence)	U2 (Negative Sequence)	U0 (Zero Sequence)		
I Sequence*	I1 (Positive Sequence)	I2 (Negative Sequence)	I0 (Zero Sequence)		

* Available in Firmware V1.00.03 or later.

~ Available in Firmware V1.00.06 or later.

Table 4-2 Basic Measurements

4.2.2 Energy Measurements

The PMC-53A provides Energy parameters for active energy (kWh), reactive energy (kvarh) and apparent energy (kVAh) with a resolution of 0.1k and a maximum value of ±100,000,000.0. When the maximum value is reached, the energy registers will automatically roll over to zero. The energy can be reset manually through the Front Panel or via communications. Further, the energy can be preset to user defined values via communications.

The PMC-53A provides the following energy measurements:

3-Phase Energy	kWh Import/Export/Net/Total
	kWh Import/Export of TOU T1-8
	kvarh Import/Export/Net/Total
	kvarh Import/Export of TOU T1-8
Per-Phase Energy (Phase A/B/C):	kvar of Q1/Q2/Q3/Q4
	kVAh Total
	kVAh Total of TOU T1-8
	kWh Import/Export/Net/Total
	kWh Import/Export of TOU T1-8
	kvarh Import/Export/Net/Total
	kvarh Import/Export of TOU T1-8
	kvar of Q1/Q2/Q3/Q4
	kVAh
	kVAh of TOU T1-8

Table 4-3 Energy Measurement

4.2.3 Interval Energy Measurements

The PMC-53A provides Interval Energy measurements of kWh Import/Export, kvar Import/Export and kVAh since Firmware V1.00.03. The Interval Energy measurements represent the amount of energy consumed during the last completed interval as defined by **EN Period**. The Interval Energy Measurements can only be retrieved through communications and are not available on the Front Panel.

The Interval Energy Period (**EN Period**) setup parameter can be programmed from the Front Panel or through communications and allows the user to specify the interval for which the real-time energy consumption should be accumulated. Please note that changing the Interval Energy Period would clear the present Interval Energy measurements.

4.2.4 Demand Measurements

Demand is defined as the average power consumption over a fixed interval (usually 15 minutes) based on the sliding window method. The PMC-53A provides Present Demand and Predicted Demand for Ia, Ib, Ic, kW Total, kvar Total and kVA Total as well as kW Total, kvar Total and kVA Total of TOU Tariff 1 to 8. Only Import Demand is provided for kW Total, kvar total and kVA Total. Predicted Demand is typically used for pre-alarming and to help users reduce power consumption using a Setpoint to warn that the Demand limit may be exceeded.

The PMC-53A provides the following setup parameters:

Setup Parameter	Definition	Options
Demand Period	1 to 60 minutes. For example, if the # of Sliding Windows is set as 1 and the Demand Period is 15, the demand cycle will be $1 \times 15 = 15\text{min}$.	1 to 60 min Default=15
# of Sliding Windows	Number of Sliding Windows.	1 to 15 Default=1
Self-Read Time	The Self-Read Time allows the user to specify the time and day of the month for the Peak Demand Self-Read operation. The Self-Read Time supports three options:	Default=0xFFFF

	<ul style="list-style-type: none"> A zero value means that the Self-Read will take place at 00:00 of the first day of each month. A non-zero value means that the Self-Read will take place at a specific time and day based on the formula: Self-Read Time = Day * 100 + Hour where $0 \leq \text{Hour} \leq 23$ and $1 \leq \text{Day} \leq 28$. For example, the value 1512 means that the Self-Read will take place at 12:00pm on the 15th day of each month. A 0xFFFF value will disable the Self-Read operation and replace it with Manual operation. A manual reset will cause the Max. Demand of This Month to be transferred to the Max. Demand of Last Month and then reset. The terms This Month and Last Month will become Since Last Reset and Before Last Reset. 	
Predicted Response	The Predicted Response shows the speed of the predicted demand output. A value between 70 and 99 is recommended for a reasonably fast response. Specify a higher value for higher sensitivity.	70 to 99 Default=70

Table 4-4 Demand Setup

4.3 Power Quality

4.3.1 Phase Angles

Phase analysis is used to identify the angle relationship between 3-phase Voltages and Currents.

For WYE connected systems, the per phase difference of the Current and Voltage angles should correspond to the per phase PF. For example, if the PF is 0.5 Lag and the Voltage phase angles are 0.0°, 240.0° and 120.0°, the Current phase angles should have the values of -60.0°, 180.0° and 60.0°.

4.3.2 Power Quality Parameters

The PMC-53A provides the following PQ parameters:

4.3.2.1 Harmonics

The PMC-53A provides harmonic analysis for THD, TOHD, TEHD and individual harmonics up to the 31st order. All harmonic parameters are available on the Front Panel and through communications. In addition, the PMC-53A also provides TDD, K-factor and Crest-factor measurements for Current.

4.3.2.2 TDD

Total Demand Distortion (TDD) is defined as the ratio of the RMS (Root Mean Square) of the Harmonic Current to the RMS of the Rated or Maximum Fundamental Current Demand.

TDD of Current is calculated by the formula below:

$$TDD = \sqrt{\sum_{h=1}^{h=\infty} (I_h)^2} / I_L$$

where

I_L = Maximum Fundamental Current Demand

h = Harmonic Order (1, 2, 3, 4, etc.)

I_h = RMS Load Current at the n^{th} Harmonic

4.3.2.3 K-Factor

K-Factor is defined as the weighted sum of the Harmonic Load Current according to their effects on transformer heating, as derived from ANSI/IEEE C57.110. A **K-Factor** of 1.0 indicates a linear load (no

harmonics). The higher the **K-Factor**, the greater the harmonic heating effect.

$$K-Factor = \frac{\sum_{h=1}^{h=h_{\max}} (I_h h)^2}{\sum_{h=1}^{h=h_{\max}} (I_h)^2}$$

where

I_h = h^{th} Harmonic Current in RMS

h_{\max} = Highest harmonic order

4.3.2.4 Crest Factor

Crest Factor is defined as the **Peak to Average Ratio (PAR)**, and its calculation is illustrated below:

$$C = \frac{|X|_{\text{peak}}}{X_{\text{rms}}}$$

where

$|X|_{\text{peak}}$ = Peak amplitude of the waveform

X_{rms} = RMS value

The following table illustrates the available Voltage and Current Harmonics measurements on the PMC-53A.

	Phase A/AB	Phase B/BC	Phase C/CA
Harmonic-Voltage	THD	THD	THD
	TEHD	TEHD	TEHD
	TOHD	TOHD	TOHD
	2 nd Harmonics	2 nd Harmonics	2 nd Harmonics
	...		
Harmonic-Current	31 st Harmonics	31 st Harmonics	31 st Harmonics
	THD	THD	THD
	TEHD	TEHD	TEHD
	TOHD	TOHD	TOHD
	TDD	TDD	TDD
	TEDD	TEDD	TEDD
	TODD	TODD	TODD
	K-factor	K-factor	K-factor
	Crest-factor	Crest-factor	Crest-factor
	2 nd Harmonics	2 nd Harmonics	2 nd Harmonics
	...		
	31 st Harmonics	31 st Harmonics	31 st Harmonics

Table 4-5 Harmonic Measurements

4.3.3 Unbalance

The PMC-53A provides Voltage and Current Unbalance measurements. The calculation method of Voltage and Current Unbalances are listed below:

$$\text{Voltage Unbalance} = \frac{V_2}{V_1} \times 100\%$$

$$\text{Current Unbalance} = \frac{I_2}{I_1} \times 100\%$$

where

V_1, V_2 are the Positive and Negative Sequence Components for Voltage, respectively.

and

I_1, I_2 are the Positive and Negative Sequence Components for Current, respectively.

4.4 Setpoints

The PMC-53A comes standard with 9 user programmable Setpoints which provide extensive control by allowing a user to initiate an action in response to a specific condition. Typical setpoint applications include alarming, fault detection and power quality monitoring.

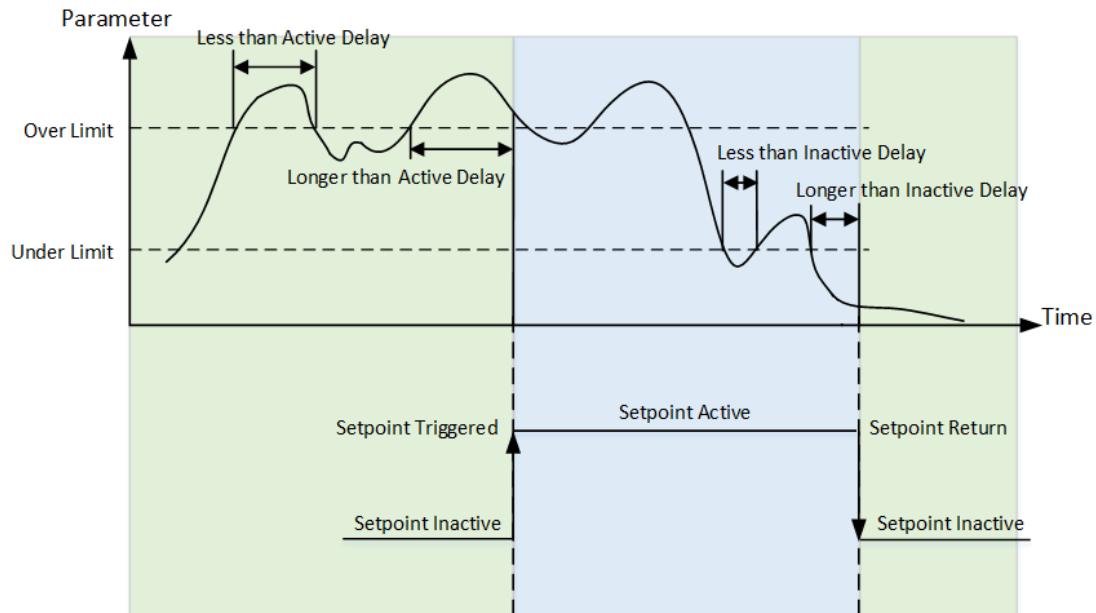

Figure 4-1 Over Setpoint

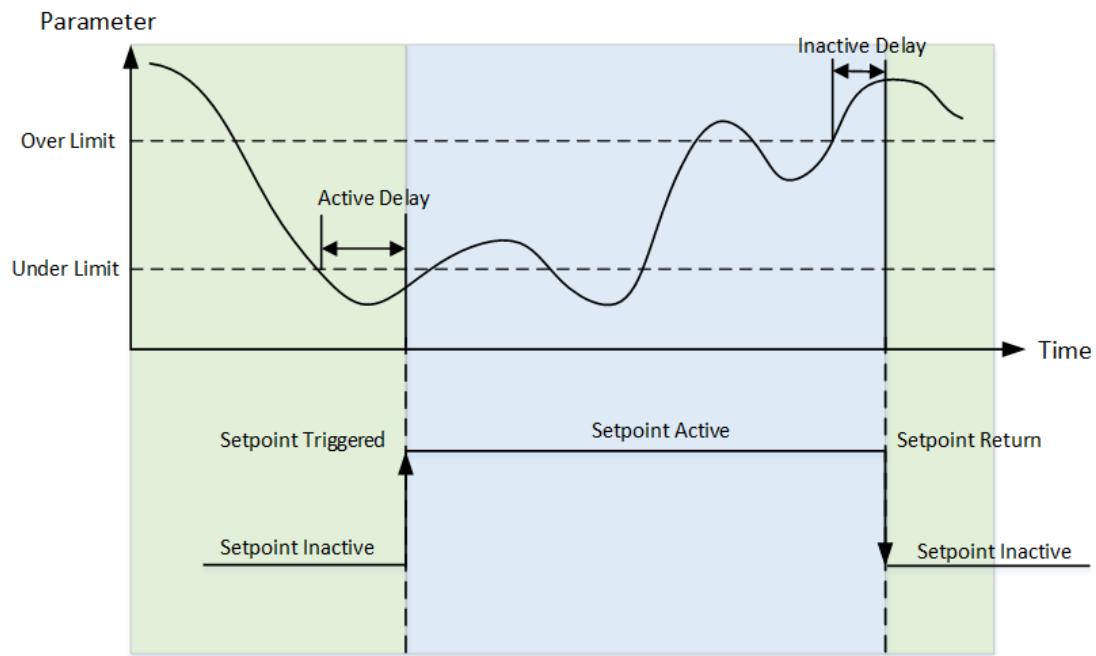

Figure 4-2 Under Setpoint

Setpoints can be programmed via the Front Panel or through communications and have the following setup parameters:

Setup Parameter	Definition	Options/Default*
Setpoint Type	Over or Under Setpoint.	0=Over Setpoint* 1=Under Setpoint
Setpoint Parameter	Specify the parameter to be monitored.	See Table 4-7
Over Limit	Specify the value that the setpoint parameter must exceed for Over Setpoint to become active or for Under Setpoint to become inactive.	0*
Under Limit	Specify the value that the setpoint parameter must go below for Over Setpoint to become inactive or for Under Setpoint to become active.	0*
Active Delay	Specify the minimum duration that the setpoint condition must be met before the setpoint becomes active. An event will be generated and stored in the SOE Log. The range of the Active Delay is between 0 and 9999 seconds.	0 to 9999s Default=10
Inactive Delay	Specify the minimum duration that the setpoint return condition must be met before the setpoint becomes inactive. An event will be generated and stored in the SOE Log. The range of the Inactive Delay is between 0 and 9999 seconds.	0 to 9999 Default=10
Setpoint Trigger	Specify what action a setpoint would take when it becomes active. Please refer to Table 4-8 below for a list of Setpoint Triggers.	See table 4-8

Table 4-6 Description for Setpoint Parameters

In addition, the LCD would blink when there is an active setpoint alarm if the **SP LCD Alarm** (Register #6048) is set to **Enable** via the Front Panel or through communications.

Key	Setpoint Parameter	Scale	Unit
0	None	-	-
1	Uln (Any Phase Voltage)		V
2	Ull (Any Line Voltage)		
3	I (Any Phase Current)		A
4	In (Calculated)		
5	Frequency		Hz
6	P (kW Total)		W
7	Q (kvar Total)		var
8	S (kVA Total)		VA
9	PF (PF Total)		-
10	P DMD (kW Total Present Demand)		W
11	Q DMD (kvar Total Present Demand)		var
12	S DMD (kVA Total Present Demand)		VA
13	P DMD Pred (kW Total Predicted Demand)		W
14	Q DMD Pred (kvar Total Predicted Demand)		var
15	S DMD Pred (kVA Total Predicted Demand)		VA
16	U THD		100%
17	U TOHD		100%
18	U TEHD		100%
19	I THD		100%
20	I TOHD		100%
21	I TEHD		100%
22	U Unbal (Voltage Unbalance)		100%
23	I Unbal (Current Unbalance)		100%
24	Reversal (Phase Reversal) ³	-	
25	I4 (Measured)*	x1	A
26	AI*		-
27	Reserved	-	-
28	RTD1*	x1	°C
29	RTD2*		
30	Ir (Residual Current)~	x1	A
31	U2 (-ve Sequence Unbalance)~	x1	V
32	U0 (Zero Sequence Unbalance)~		

* Valid only if the device is equipped with the appropriate option

~ Available in Firmware V1.00.06 or later

Table 4-7 Setpoint Parameters

Key	Action	Key	Action
0	None	3	DO3 Closed
1	DO1 Closed	4	DO4 Closed
2	DO2 Closed	Others	Reserved

Table 4-8 Setpoint Triggers

Only when **DOx Mode** is set to **Remote Control/Setpoint** would setting the **Setpoint Trigger** to **DOx Closed** valid. In addition,

- Only when the PMC-53A's **Basic Function** option is "3" (4xDI+3xRelay Output) or "A" (4xDI+2xSS Pulse Output) would setting the **Setpoint Trigger** to **DO1 Closed** or **DO2 Closed** have meaning.
- Only when the **Expansion Module B** is equipped with the "2xDI + 2xDO (Relay Output)" or "2xDI + 2xSS Pulse Output" options would setting the **Setpoint Trigger** to **DO3 Closed** or **DO4 Closed** have meaning.

4.5 Logging

4.5.1 Max./Min. Log

The PMC-53A records the **Max. Log** and **Min. Log of This Month (Since Last Reset)** and **Last Month (Before Last Reset)** with timestamp for 45 parameters. Each log includes the relevant parameter value and its timestamp. The recorded data is stored in non-volatile memory and will not suffer any loss in the event of a power failure. The PMC-53A's Max./Min. Log records the following parameters:

Max./Min. Parameters					
Ia	Ib	Ic	I avg	Uan	Ubn
Ucn	Uln avg	Uab	Ubc	Uca	Ull avg
kWa	kWb	kWc	kW Total	kvara	kvarb
kvarc	kvar Total	kVAA	kVAb	kVAc	kVA Total
PFa	PFb	PFc	PF Total	Frequency	I4
Ia THD	Ib THD	Ic THD	Uan/Uab THD	Ubn/Ubc THD	Ucn/Uca THD
Ia K-Factor	Ib K-Factor	Ic K-Factor	Ia Crest-factor	Ib Crest-factor	Ic Crest-factor
U Unbal.	I Unbal.	In (Calculated)	Ir*		

* Available in Firmware V1.00.06 or later

Table 4-9 Max./Min. Log

The same **Self-Read Time** for the Peak Demand Log is used to specify the time and day of the month for the Max./Min. Self-Read operation. Please refer to Section 4.2.4 for a complete description of the **Self-Read Time** and its operation. The Max./Min. Log of This Month can be reset manually from the Front Panel or via communications.

4.5.2 Peak Demand Log

The PMC-53A records the **Peak Demand of This Month (Since Last Reset)** and **Last Month (Before Last Reset)** with timestamp for Ia, Ib, Ic, kW Total, kvar Total and kVA Total as well as kW Total, kvar Total and kVA Total for TOU Tariffs 1 to 8. The Peak Demand of This Month (Since Last Reset) can be accessed from the Front Panel as well as communications while the Peak Demand of Last Month (Before Last Reset) can only be retrieved through communications. Please refer to Section 4.2.4 for a complete description of the **Self-Read Time** and its operation.

Peak Demand Logs of This Month (Since Last Reset) and Last Month (Before Last Reset)
Ia
Ib
Ic

kW Total
kvar Total
kVA Total

kvar Total for TOU Tariffs 1 to 8
kVA Total for TOU Tariffs 1 to 8

Table 4-10 Peak Demand Log

4.5.3 Monthly Energy Log

The PMC-53A stores monthly energy data for the present month and the last 12 months. The **Monthly Energy Log Self-read Time** setup parameter allows the user to specify the time and day of the month for the Recorder's Self-read operation via communications. The Monthly Energy Logs are stored in the meter's non-volatile memory and will not suffer any loss in the event of power failure, and they are stored on a First-In-First-Out basis where the newest log will overwrite the oldest.

The **Monthly Energy Log Self-Read Time** supports two options:

- A zero value means that the Self-Read will take place at 00:00 of the first day of each month.
- A non-zero value means that the Self-Read will take place at a specific time and day based on the formula: Energy Self-Read Time = Day x 100 + Hour where $0 \leq \text{Hour} \leq 23$ and $1 \leq \text{Day} \leq 28$. For example, the value 1512 means that the Self-Read will take place at 12:00pm on the 15th day of each month.

The Monthly Energy Logs can be reset manually through the front panel or via communications.

The PMC-53A provides the following energy data for the present month and the last 12 months:

Active Energy	kWh Import	kWh Export	kWh Net	kWh Total
	T1 kWh Import	T2 kWh Import	T3 kWh Import	T4 kWh Import
	T5 kWh Import	T6 kWh Import	T7 kWh Import	T8 kWh Import
	T1 kWh Export	T2 kWh Export	T3 kWh Export	T4 kWh Export
	T5 kWh Export	T6 kWh Export	T7 kWh Export	T8 kWh Export
	kvarh Import	kvarh Export	kvarh Net	kvarh Total
Reactive Energy	T1 kvarh Import	T2 kvarh Import	T3 kvarh Import	T4 kvarh Import
	T5 kvarh Import	T6 kvarh Import	T7 kvarh Import	T8 kvarh Import
	T1 kvarh Export	T2 kvarh Export	T3 kvarh Export	T4 kvarh Export
	T5 kvarh Export	T6 kvarh Export	T7 kvarh Export	T8 kvarh Export
	kvarh Q1	kvarh Q2	kvarh Q3	kvarh Q4
	kVAh			
Apparent Energy	T1 kVAh	T2 kVAh	T3 kVAh	T4 kVAh
	T5 kVAh	T6 kVAh	T7 kVAh	T8 kVAh

Table 4-11 Energy Measurements for each Monthly Energy Log Record

4.5.4 Daily and Monthly Freeze Log (Optional)

The PMC-53A optionally provides a **Daily Freeze Log** and a **Monthly Freeze Log** for Energy and Demand parameters and can store up to 60 daily freeze records (2 months) and 36 monthly freeze records (3 years). All Freeze Logs and their respective setup registers can only be accessed through communications. The PMC-53A's Freeze Logs can freeze and record the following parameters:

Freeze Type	Parameters	Depth
Daily Freeze	kWh Total, kvarh Total, kVAh Total Peak Demands for kW Total, kvar Total and kVA Total	60
Monthly Freeze	kWh Total, kvarh Total, kVAh Total Peak Demands for kW Total, kvar Total and kVA Total with Timestamp	36

Table 4-12 Freeze Log

The **Daily Self-Read Time** setup parameter allows the user to specify the time of the day for the Daily Freeze Log Self-Read operation, while the **Monthly Self-Read Time** setup parameter allows the user to

specify the time and day of the month for the Monthly Freeze Log Self-Read operation.

- 1) **Daily Freeze Self-Read Time** can be set to a zero value or a non-zero value:
 - A zero value means that the Self-Read will take place at 00:00 everyday.
 - A non-zero value means that the Self-Read will take place at a specific time of the day based on the formula: Self-Read time = (Hour x 100 + Min) where $0 \leq \text{Hour} \leq 23$ and $0 \leq \text{Min} \leq 59$. For example, the value 1512 means that the Self-Read will take place at 15:12 of each day.
- 2) **Monthly Freeze Self-Read Time** can be set to a zero value or a non-zero value:
 - A zero value means that the Self-Read will take place at 00:00 of the first day of each month.
 - A non-zero value means that the Self-Read will take place at a specific time and day based on the formula: Monthly Self-Read Time = Day x 100 + Hour where $0 \leq \text{Hour} \leq 23$ and $1 \leq \text{Day} \leq 28$. For example, the value 1512 means that the Self-Read will take place at 12:00pm on the 15th day of each month.

4.5.5 SOE Log

The PMC-53A's SOE Log can store up to 100 events such as Power-on, Power-off, Digital Input status changes, Digital Output status changes, Setup changes and Setpoint events in its non-volatile memory. Each event record includes the event classification, its relevant parameter values and a timestamp in ± 1 ms resolution. The SOE Log can be displayed on the Front Panel and retrieved via communications. If there are more than 100 events, the newest event will replace the oldest event on a First-In-First-Out basis. The SOE Log can be reset from the Front Panel or via communications.

4.5.6 Data Recorder (DR) Log (Optional)

The PMC-53A optionally provides five Data Recorders capable of recording a maximum of 16 parameters each. The Data Recorder Log is stored in the device's non-volatile memory and will not suffer any loss in the event of a power failure. The programming of the Data Recorder is only supported over communications. Each Data Recorder provides the following setup parameters:

Setup Parameters	Value/Option	Default
Trigger Mode	0=Disabled / 1=Triggered by Timer	1
Recording Mode	0=Stop-When-Full / 1=First-In-First-Out	1
Recording Depth	1 to 10,000 (entry)	5760
Recording Interval	60 to 3,456,000 seconds	900 s
Offset Time	0 to 43,200 seconds, 0 indicates no offset	0
Number of Parameters	0 to 16	16
Parameter 1 to 16	See Appendix A for a complete list of parameters	See Appendix B

Table 4-13 Setup Parameters for Data Recorder

The Data Recorder Log is only operational when the values of **Trigger Mode**, **Recording Depth**, **Recording Interval**, and **Number of Parameters** are all non-zero.

The **Recording Offset** parameter can be used to delay the recording by a fixed time from the **Recording Interval**. For example, if the **Recording Interval** parameter is set to 3600 (hourly) and the **Recording Offset** parameter is set to 300 (5 minutes), the recording will take place at 5 minutes after the hour every hour, i.e. 00:05, 01:05, 02:05...etc. The value of the **Recording Offset** parameter should be less than the **Recording Interval** parameter.

4.6 Time of Use (TOU)

TOU is used for electricity pricing that varies depending on the time of day, day of week, and season. The TOU system allows the user to configure an electricity price schedule inside the PMC-53A and accumulate energy consumption into different TOU tariffs based on the time of consumption. TOU programming is only supported through communications.

The TOU feature on PMC-53A supports two TOU schedules, which can be switched at a pre-defined time. Each TOU schedule supports:

- Up to 12 seasons
- 90 Holidays or Alternate Days
- 20 Daily Profiles, each with 12 Periods in 15-minute interval
- 8 Tariffs

Instead of using the TOU schedule to switch between Tariffs, the PMC-53A supports Tariff switching based on the status of DI1 to DI3 in Firmware V1.00.03 or later.

The 3 Digital Inputs (DI1, DI2 and DI3) represent 3 binary digits where Tariff 1=000, Tariff 2=001, Tariff 3= 010, ...Tariff 7=110 and Tariff 8=111 where DI1 represents the least significant digit and DI3 represents the most significant digit. As soon as DI1, DI2 and/or DI3 are configured as **Tariff Switches**, the current **TOU Tariff** will be determined by the status of the DIs, and the TOU Schedule will be ignored.

The **DI1 Function** setup register must first be programmed as a **Tariff Switch** before configuring DI2 and DI3 with the same function. In other words, if DI1 is configured as a **Digital Input or Energy Pulse Counter**, and DI2 is configured as a **Tariff Switch**, the TOU will continue to function based on the TOU Schedule. The number of Tariffs supported depends on how many DIs are programmed as a Tariff Switch as indicated in the following table.

Tariff	DI Function		
	DI1 = Tariff Switch	DI2 & DI1 = Tariff Switch	DI3, DI2 & DI1 = Tariff Switch
T1	DI1 (0=T1)	DI2 + DI1 (00=T1)	DI3 + DI2 + DI1 (000=T1)
T2	DI1 (1=T2)	DI2 + DI1 (01=T2)	DI3 + DI2 + DI1 (001=T2)
T3	Not Available	DI2 + DI1 (10=T3)	DI3 + DI2 + DI1 (010=T3)
T4	Not Available	DI2 + DI1 (11=T4)	DI3 + DI2 + DI1 (011=T4)
T5	Not Available	Not Available	DI3 + DI2 + DI1 (100=T5)
T6	Not Available	Not Available	DI3 + DI2 + DI1 (101=T6)
T7	Not Available	Not Available	DI3 + DI2 + DI1 (110=T7)
T8	Not Available	Not Available	DI3 + DI2 + DI1 (111=T8)

Table 4-14 DIs and the Number of Tariffs Setup

Each TOU schedule has the following setup parameters and can only be programmed via communications:

Setup Parameters	Definition	Options
Daily Profile #	Specify a daily rate schedule which can be divided into a maximum of 12 periods in 15-min intervals. Up to 20 Daily Profiles can be programmed for each TOU schedule.	1 to 20, the first period starts at 00:00 and the last period ends at 24:00.
Season #	A year can be divided into a maximum of 12 seasons. Each season is specified with a Start Date and ends with the next season's Start Date.	1 to 12, starts from January 1 st
Alternate Days #	A day can be defined as an Alternate Day, such as May 1 st . Each Alternate Day is assigned a Daily Profile.	1 to 90.
Day Types	Specify the day type of the week. Each day of a week can be assigned a day type such as Weekday1, Weekday2, Weekday3 and Alternate Days. The Alternate Day has the highest priority.	Weekday1, Weekday2, Weekday3 and Alternate Days

Switching Time	Specify when to switch from one TOU schedule to another. Writing 0xFFFFFFFF to this parameter disables switching between TOU schedules.	Format: YYYYMMDDHH Default=0xFFFFFFFF
-----------------------	-----------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------

Table 4-15 TOU Setup Parameters

For each of the 8 Tariff Rates, the PMC-53A provides the following information:

Energy: kWh Import/Export, kvarh Import/Export, kVAh – Per Phase and Total

Peak Demand: kW/kvar/kVA of This Month (Since Last Reset) and Last Month (Before Last Reset).

TOU data is available through the front panel and communications.

4.7 Diagnostics

The PMC-53A provides wiring error detection for 3P4W and 3P3W wiring modes, which allow users to check for possible problems especially during the initial commissioning stage. The following wiring errors may be detected:

- Frequency Out-of-Range
- Voltage / Current Phase Loss
- Incorrect Voltage and Current Phase Sequence
- kW Direction per phase and Total
- Possible Incorrect CT Polarity
- Broken RTD

Please note the detections above are based on the assumptions below:

- The Voltage and Current Phase Sequence are consistent
- kW is kW Import, which means the kW is over 0
- The wiring is correct
- 3P4W wiring mode supports all detections
- 3P3W wiring mode does not support the detection of Voltage Phase Loss, kW Direction per phase and CT Polarity

The Diagnostic register (0101) indicates the status of the wiring error detection with a bit value of 1 meaning active and 0 meaning inactive which are illustrated in table below:

Bit	Event
B00	Summary Bit (Set if any other bit is set)
B01	Frequency is out of range (45 to 65Hz) (3P4W or 3P3W)
B02	Any phase voltage < 10% of PT Primary (Register 6000) (3P4W only)
B03	Any phase current < 10% of CT Primary (Register 6004) (3P4W or 3P3W)
B04	RTD 1 broken (RTD Input option only)
B05	RTD 2 broken (RTD Input option only)
B06	Voltage Phase Reversal (3P4W only)
B07	Current Phase Reversal (3P4W or 3P3W)
B08	Negative kW Total may be abnormal (3P4W or 3P3W)
B09	Negative kWa may be abnormal (3P4W only)
B10	Negative kWb may be abnormal (3P4W only)
B11	Negative kWc may be abnormal (3P4W only)
B12	CTa polarity may be reversed (3P4W only)
B13	CTb polarity may be reversed (3P4W only)
B14	CTc polarity may be reversed (3P4W only)
B15	Reserved

Table 4-16 Wiring Diagnostic Register

Chapter 5 Modbus Register Map

This chapter provides a complete description of the Modbus register map (**Protocol Version 1.4**) for the PMC-53A to facilitate the development of 3rd party communications driver for accessing information on the PMC-53A. For a complete Modbus Protocol Specification, please visit <http://www.modbus.org>. The PMC-53A supports the following Modbus functions:

- 1) Read Holding Registers (Function Code 0x03)
- 2) Force Single Coil (Function Code 0x05)
- 3) Preset Multiple Registers (Function Code 0x10)

The following table provides a description of the different data formats used for the Modbus registers. The PMC-53A uses the Big Endian byte ordering system.

Format	Description
UINT16/INT16	Unsigned/Signed 16-bit Integer
UINT32/INT32	Unsigned/Signed 32-bit Integer
Float	IEEE 754 32-bit Single Precision Floating Point Number

Available in Firmware V1.00.06 or later

Table 5-1 Basic Measurements

Notes:

- 1) I4, AI, RTD1, RTD2, AO, DI Status, DO Status and DRx Log Pointers are only meaningful if the meter is equipped with the corresponding option.
- 2) For the **DI Status** register, the bit values of B0 to B5 represent the states of DI1 to DI6, respectively, with "1" meaning Active (Closed) and "0" meaning Inactive (Open).
- 3) For the **DO Status** register, the bit values of B0 to B3 represent the states of DO1 to DO4, respectively, with "1" meaning Active (Closed) and "0" meaning Inactive (Open).
- 4) For the **Setpoint Status** register, the bit values indicate the various Setpoint states with "1" meaning Active and "0" meaning Inactive. The following table illustrates the details of the **Alarm Status** register.

Bit15	Bit14	Bit13	Bit12	Bit11	Bit10	Bit9	Bit8
Reserved	Setpoint9						
Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
Setpoint8	Setpoint7	Setpoint6	Setpoint5	Setpoint4	Setpoint3	Setpoint2	Setpoint1

Table 5-2 Alarm Status Register

- 5) The following table illustrates the Wiring Diagnostic Status with 0 meaning Normal and 1 meaning Abnormal:

Bit	Event
B00	Summary Bit (Set if any other bit is set)
B01	Frequency is out of range (45 to 65Hz) (3P4W or 3P3W)
B02	Any phase voltage < 10% of PT Primary (Register 6000) (3P4W only)
B03	Any phase current < 10% of CT Primary (Register 6004) (3P4W or 3P3W)
B04	RTD 1 broken (RTD Input option only)
B05	RTD 2 broken (RTD Input option only)
B06	Voltage Phase Reversal (3P4W only)
B07	Current Phase Reversal (3P4W or 3P3W)
B08	Negative kW Total may be abnormal (3P4W or 3P3W)
B09	Negative kWa is may be abnormal (3P4W only)
B10	Negative kWb may be abnormal (3P4W only)
B11	Negative kWc may be abnormal (3P4W only)
B12	CTa polarity may be reversed (3P4W only)
B13	CTb polarity may be reversed (3P4W only)
B14	CTc polarity may be reversed (3P4W only)
B15	Reserved

Table 5-3 Wiring Diagnostic Status Register

- 6) The range of the Log Pointers (SOE and DRx) is between 0 and 0xFFFFFFFF. The Log Pointer is incremented by one for every new log generated and will roll over to 0 if its current value is 0xFFFFFFFF. If a Clear SOE Log or Clear DRx Log is performed from the front panel or via communications, the corresponding Log Pointer will be reset to zero. Therefore, any 3rd party software should assume that a Clear Log action has been performed if it sees the SOE Log Pointer rolling over to zero or to a value that is smaller than its own pointer.
- 7) The **Device Operating Time** means the accumulated running time whenever any per-phase Current exceeds the **Current Threshold** of the **Device Operating Time** (Register #6049). The **Device Operating Time** data is stored in non-volatile memory and will not suffer any loss in the event of a power failure.
- 8) The PMC-53A has one SOE Log and five DR Logs. Each of these logs has a Log Pointer that indicates its current logging position. The range of the **Log Pointer** is between 0 and 0xFFFFFFFF, and it is incremented by one for every new log generated and will roll over to 0 if its current value is 0xFFFFFFFF. A value of zero indicates that the SOE or DRx does not contain any Log. If a **Clear Log** is performed via communications, its **Log Pointer** will be reset to zero.

Use the following equation to determine the latest log location:

$$\text{Latest Log Location} = \text{Modulo } [\text{Log Pointer} / \text{Log Depth}]$$

where **Log Pointer** may be one of the following:

SOE Log Pointer, DR1 – DR5 Log Pointers

and **Log Depth** is as follows:

SOE Log Depth = 100 (fixed)

DRx Log Depth = DRx Recording Depth (see Section 5.11.5 Data Recorder Setup)

- 9) When the **Wiring Mode** is **1P2W L-N** or **1P2W L-L**, the L2 and L3 phase voltages and currents have no meaning, and their registers are reserved.
- 10) When the **Wiring Mode** is **1P2W L-N**, **1P2W L-L** or **1P3W**, the Sequence Components U1/I1, U2/I2 and U0/I0 have no meaning and their registers are reserved.

5.2 Energy Measurements

The Energy registers have a maximum value of 1,000,000,000 and will roll over to zero automatically when it is reached. The actual energy value is 0.1 times of the register value.

5.2.1 3-Phase Total Energy Measurements

1796	RO	Ucn/Uca HD31	Float		

Table 5-12 Voltage Harmonic Measurements

Notes:

- 1) When the **Wiring Mode** is **3P3W** or **1P2W L-L**, the phase A/B/C Voltage THD/TOHD/TEHD/HDxx mean phase AB/BC/CA Voltage THD/TOHD/TEHD/HDxx.
- 2) When the **Wiring Mode** is **1P2W L-N** or **1P2W L-L**, the L2 and L3 phase voltages THD/TOHD/TEHD/HDxx have no meaning, and their registers are reserved. When the **Wiring Mode** is **1P3W L-N**, the L3 phase voltages THD/TOHD/TEHD/HDxx have no meaning, and their registers are reserved.

Table 5-23 Monthly Energy Log

Notes:

- 1) This register represents the Month when it is read. To read the Monthly Energy Log, this register must be first written to indicate to the PMC-53A which log to load from memory. The range of this register is from 0 to 12, which represents the Present Month and the Last 12 Months. For example, if the current month is 2016/10, "0" means 2016/10, "1" means 2016/09, "2" means 2016/08, ... and "12" means "2015/10".
- 2) For each Monthly Energy Log, the time stamp shows the exact Self-Read Time (20YY/MM/DD HH:MM:SS) when the log was recorded. For the Monthly Energy Log of the Present Month, the time stamp shows the current time of the meter because the Present Month is not yet over.
- 3) The Monthly Energy Log for the Present Month can be modified, but the Monthly Energy Logs for the Last 12 Months are Read Only.

5.8 Daily and Monthly Freeze Logs (Optional)**5.8.1 Daily Freeze Log**

Register	Property	Description	Format	Scale	Unit
12000	RW	Index ¹	INT16	1 to 60	
12001	RO	High-order Byte: Year (0-99) Low-order Byte: Month (1-12)	INT16	-	
12002	RO	High-order Byte: Day (1-31) Low-order Byte: Hour (0-23)	INT16		
12003	RO	High-order Byte: Minute (0-59) Low-order Byte: Second (0-59)	INT16		
12004	RO	kWh Total	INT32	x0.1	kWh
12006	RO	kvarh Total	INT32	x0.1	kvarh
12008	RO	kVAh Total	INT32	x0.1	kVAh
12010	RO	Peak Demand of kW Total	Float	x1	W
12012	RO	Peak Demand of kvar Total	Float	x1	var
12014	RO	Peak Demand of kVA Total	Float	x1	VA

Table 5-24 Daily Freeze Log**Notes:**

- 1) There is no Log Pointer that indicates the current logging position. Writing a value N between 1 and 60 to the **Index** register to retrieve the Daily Freeze Log of the Nth entry. For example, writing 1 to the **Index** register will retrieve yesterday's Daily Freeze Log. If N = 0 or N > 60, an exception response will be returned with the Illegal Data Value error code (0x03) as defined by the Modbus protocol. If all the returned values of the Nth Log Record (where 1 ≤ N ≤ 60) are all 0 (including the timestamp), this indicates that the returned Log Record is invalid and that the end of the Log has been reached. If the software is reading the Log for the very first time, it should start with N=1 and stop when either N=60 or when the returned Log Record is invalid. After that, all the software has to do is to read the Log on a daily basis with N=1.

5.8.2 Monthly Freeze Log

Register	Property	Description	Format	Scale	Unit
12500	RW	Index ¹	INT16	1 to 36	
12501	RO	High-order Byte: Year (0-99) Low-order Byte: Month (1-12)	INT16	-	
12502	RO	High-order Byte: Day (1-31) Low-order Byte: Hour (0-23)	INT16		
12503	RO	High-order Byte: Minute (0-59) Low-order Byte: Second (0-59)	INT16		
12504	RO	kWh Total	INT32	x0.1	kWh
12506	RO	kvarh Total	INT32	x0.1	kvarh
12508	RO	kVAh Total	INT32	x0.1	kVAh
12510~12515	RO	Peak Demand of kW Total	See Table 5-26 Demand Data Structure		
12516~12521	RO	Peak Demand of kvar Total			
12522~12527	RO	Peak Demand of kVA Total			

Table 5-25 Monthly Freeze Log

Offset		Description
+0	High	Year - 2000
	Low	Month
+1	High	Day

	Low	Hour
+2	High	Minute
	Low	Second
+3	-	Millisecond
+4~+5	-	Peak Demand Value

Table 5-26 Demand Data Structure**Notes:**

- 1) There is no Log Pointer that indicates the current logging position. Writing a value N between 1 and 36 to the **Index** register to retrieve the Monthly Freeze Log of the Nth entry. For example, writing 1 to the **Index** register will retrieve last month's Monthly Freeze Log. If N = 0 or N > 36, an exception response will be returned with the Illegal Data Value error code (0x03) as defined by the Modbus protocol. If all the returned values of the Nth Log Record (where 1 ≤ N ≤ 36) are all 0 (including the timestamp), this indicates that the returned Log Record is invalid and that the end of the Log has been reached. If the software is reading the Log for the very first time, it should start with N=1 and stop when either N=36 or when the returned Log Record is invalid. After that, all the software has to do is to read the Log on a monthly basis with N=1.

5.9 SOE Log

The SOE Log Pointer points to the register address within the SOE Log where the next event will be stored. The following formula is used to determine the register address of the most recent SOE event referenced by the SOE Log Pointer value:

$$\text{Register Address} = 10000 + \text{Modulo}(\text{SOE Log Pointer}-1)/100)*8$$

Register	Property	Description	Format
10000~10007	RO	Event 1	
10008~10015	RO	Event 2	
10016~10023	RO	Event 3	
10024~10031	RO	Event 4	
10032~10039	RO	Event 5	
10040~10047	RO	Event 6	
10048~10055	RO	Event 7	
10056~10063	RO	Event 8	
10064~10071	RO	Event 9	
10072~10079	RO	Event 10	
10080~10087	RO	Event 11	
10088~10095	RO	Event 12	
...		...	
10792~10799	RO	Event 100

Table 5-29 SOE Event Classification

- 1) **Clear Present Energy Log** means to clear 3-Phase Total Energy registers, Phase A/B/C Energy registers, Tariff Energy and Monthly Energy Log of the Present Month.

- 2) **Clear Historical Monthly Energy Log** means to clear the Monthly Energy Log of the last 1 to 12 months, excluding the Monthly Energy Log for the Present Month.
- 3) **Clear All Data via Front Panel or Communication** means to clear 3-Phase Total Energy registers, Phase A/B/C Energy registers, Monthly Energy Log of the Present Month, All Peak Demands, All Max./Min. Logs, Device Operating Time, All DI Pulse Counters, All DR Logs and All Freeze Logs.
- 4) **Clear All Energy Registers** means to clear the 3-Ø Total and Per-Phase energy registers.
- 5) **Clear Present Monthly Energy Log** means to clear the Monthly Energy Log of the Present Month.
- 6) **Clear Historical Monthly Energy Log** means to clear Monthly Energy Log of the last 1 to 12 months, excluding the Monthly Energy Log for the Present Month.
- 7) The event values of **Switch TOU Schedule** are illustrated in the table below:

Record Value	Description
1	Switch Schedule 1 to Schedule 2 manually
2	Switch Schedule 2 to Schedule 1 manually
3	Switch Schedule 1 to Schedule 2 automatically
4	Switch Schedule 2 to Schedule 1 automatically

Table 5-30 TOU Switch Records

5.10 Data Recorder Log (Optional)

Register	Property	Description	Format
20000~20037	RO	DR Log #1 Buffer	See Table 5-32 Standard DR Log Structure
20038~20075	RO	DR Log #2 Buffer	
20076~20113	RO	DR Log #3 Buffer	
20114~20151	RO	DR Log #4 Buffer	
20152~20189	RO	DR Log #5 Buffer	

Table 5-31 DR Log

Offset	Property	Description	Format
+0	RW	DR Log X Pointer	UINT32
+2	RO	High-order Byte: Year (0-99) Low-order Byte: Month (1-12)	UINT16
+3	RO	High-order Byte: Day (1-31) Low-order Byte: Hour (0-23)	UINT16
+4	RO	High-order Byte: Minute (0-59) Low-order Byte: Second (0-59)	UINT16
+5	RO	Millisecond	UINT16
+6~+7	RO	Parameter #1	Float
+8~+9	RO	Parameter #2	
+10~+11		Parameter #3	
...		...	
+36~+37	RO	Parameter #16	

Table 5-32 DR Data Buffer Structure

Notes:

- 1) Writing n to the **DR Log X Pointer** register will load the Log Record at pointer position n into the DR Log X Buffer from the device's memory.
- 2) Writing a pointer value that points to a Log Record that is either already expired or has not been generated yet to the **DR Log X Pointer** register will generate an exception response with the Illegal Data Value error code (0x03) as defined by the Modbus protocol.

5.11 Device Setup

5.11.1 Basic Setup Parameters

Register	Property	Description	Format	Range, Default*
6000	RW	PT Primary ¹	UINT32	1 to 1,000,000 V, 100*

Table 5-33 Basic Setup Parameters

Notes:

- 1) The value of [PT Primary/PT Secondary] cannot exceed 10000.
- 2) There are two ways to calculate THD:

$$\text{THDf (based on Fundamental): } \text{THD} = \frac{\sqrt{\sum_{n=2}^{\infty} I_n^2}}{I_1} \times 100\%$$

where I_n represents the RMS value for the n^{th} harmonic and I_1 represents the RMS value of the Fundamental component.

$$\text{THDr (based on RMS): } \text{THD} = \frac{\sqrt{\sum_{n=2}^{\infty} I_n^2}}{\sqrt{\sum_{n=1}^{\infty} I_n^2}} \times 100\%$$

where I_n represents the RMS value for the n^{th} harmonic.

- 3) The **Self-Read Time** applies to both the Peak Demand Log as well as the Max./Min. Log and supports the following three options:
- A zero value means that the Self-Read will take place at 00:00 of the first day of each month.
 - A non-zero value means that the Self-Read will take place at a specific time and day based on the formula: Self-Read Time = (Day x 100 + Hour) where $0 \leq \text{Hour} \leq 23$ and $1 \leq \text{Day} \leq 28$. For example, the value 1512 means that the Self-Read will take place at 12:00pm on the 15th day of each month.
 - A 0xFFFF value means the automatic self-read operation is disabled and the log will be transferred manually.
- 4) The **Delimiter** setup register supports two options, 1 and 2:
- Option 1: “,” is used as the x1000 delimiter and “.” as the decimal point (e.g. 123,456,789.0).
 - Option 2: “ ” is used as the x1000 delimiter and “,” as the decimal point (e.g. 123 456 789,0).
- 5) The **Monthly Energy Log Self-Read Time** and **Monthly Freeze Self-Read Time** support only two options:
- A zero value means that the Self-Read will take place at 00:00 of the first day of each month.
 - A non-zero value means that the Self-Read will take place at a specific time and day based on the formula: Self-Read Time = Day * 100 + Hour where $0 \leq \text{Hour} \leq 23$ and $1 \leq \text{Day} \leq 28$. For example, the value 1512 means that the Self-Read will take place at 12:00pm on the 15th day of each month.
- 6) The **Daily Freeze Self-Read Time** can be set to a zero value or a non-zero value:
- A zero value means that the Self-Read will take place at 00:00 everyday.
 - A non-zero value means that the Self-Read will take place at a specific time of the day based on the formula: Self-Read time = (Hour x 100 + Min) where $0 \leq \text{Hour} \leq 23$ and $0 \leq \text{Min} \leq 59$. For example, the value 1512 means that the Self-Read will take place at 15:12 of each day.
- 7) The following table illustrates the parameters that can be selected for display in the **Default Display** screen.

Key	Parameters	Key	Parameters	Key	Parameters	Key	Parameters
0	U1 (Uan)	10	I3 (Ic)	20	T1 kWh Imp	30	Fund. kW Total*

6584	RW		Under Limit	Float	0*
6586	RW		Active Delay	UINT16	0 to 9999 s, 10*
6587	RW		Inactive Delay	UINT16	0 to 9999 s, 10*
6588	RW		Trigger Action 1 ²	UINT16	0 to 4
6589	RW		Trigger Action 2 ²	UINT16	

Table 5-38 Setpoint Setup Parameters**Notes:**

- The PMC-53A provides the following setpoint parameters:

Key	Setpoint Parameter	Scale	Unit
0	None	-	-
1	Uln (Any Phase Voltage)		V
2	Ull (Any Line Voltage)		
3	I (Any Phase Current)	x1	A
4	In (Calculated)		
5	Frequency		Hz

6	P (kW Total)		W
7	Q (kvar Total)		var
8	S (kVA Total)		VA
9	PF (PF Total)		-
10	P DMD (kW Total Present Demand)		W
11	Q DMD (kvar Total Present Demand)		var
12	S (kVA Total Present Demand)		VA
13	P DMD Pred (kW Total Predicted Demand)		W
14	Q DMD Pred (kvar Total Predicted Demand)		var
15	S DMD Pred (kVA Total Predicted Demand)		VA
16	U THD		100%
17	U TOHD		100%
18	U TEHD		100%
19	I THD		100%
20	I TOHD		100%
21	I TEHD		100%
22	U Unbal (Voltage Unbalance)		100%
23	I Unbal (Current Unbalance)		100%
24	Reversal (Phase Reversal) ³	-	
25	I4 (Measured)*	x1	A
26	AI*		-
27	Reserved	-	-
28	RTD1*	x1	°C
29	RTD2*		
30	Ir (Residual Current)~	x1	A
31	U2~	x1	V
32	U0~		

* Valid only if the device is equipped with the appropriate option

~ Available in Firmware V1.00.06

Table 5-39 Setpoint Parameters

- 2) For Over Setpoint, the setpoint parameter must exceed the **Over Limit** to become active and go below the **Under Limit** to become inactive.
For Under Setpoint, the setpoint parameter must go below the **Under Limit** to become active and exceed the **Over Limit** to become inactive.
- 3) The PMC-53A provides the following Setpoint Triggers:

Key	Action	Key	Action
0	None	3	DO3 Closed ⁴
1	DO1 Closed ⁴	4	DO4 Closed ⁴
2	DO2 Closed ⁴	Others	Reserved

Table 5-40 Setpoint Triggers

- 4) Only when **DOx Mode** is set to **Remote Control/Setpoint**, setting Setpoint Triggers to DOx Closed is valid. In addition,
 - Only when the PMC-53A's **Basic Function** option is "3" (4xDI+3xRelay Output) or "A" (4xDI+2xSS Pulse Output) would setting the **Setpoint Trigger** to **DO1 Closed** or **DO2 Closed** have meaning.
 - Only when the **Expansion Module B** is equipped with the "2xDI + 2xDO (Relay Output)" or "2xDI + 2xSS Pulse Output" options would setting the **Setpoint Trigger** to **DO3 Closed** or **DO4 Closed** have meaning.

5.11.5 Data Recorder Setup

Register	Property	Description	Format
6600~6622	RW	Data Recorder #1*	See Table 5-42 DR Setup Parameter Data Structure
6623~6645	RW	Data Recorder #2*	
6646~6668	RW	Data Recorder #3*	
6669~6691	RW	Data Recorder #4*	
6692~6714	RW	Data Recorder #5*	

* Please refer to Appendix B for the default configuration for the Data Recorders.

Table 5-41 Data Recorder Setup

Offset	Property	Description	Format	Range
+0	RW	Trigger Mode	UINT16	0=Disabled 1=Triggered by Timer

+1	RW	Recording Mode ¹	UINT16	0=Stop-when-Full 1=First-In-First-Out
+2	RW	Recording Depth ¹	UINT16	0 to 10,000
+3	RW	Recording Interval ¹	UINT32	60 to 3456000s
+5	RW	Offset Time ²	UINT16	0 to 43200s
+6	RW	Number of Parameters ¹	UINT16	0 to 16
+7	RW	Parameter #1 ¹	UINT16	Please refer to Appendices A and B for a complete list of the Data Recorder Parameters and the default configuration for each DR, respectively.
+8	RW	Parameter #2 ¹	UINT16	
+9	RW	Parameter #3 ¹	UINT16	
...	RW	...	UINT16	
+22	RW	Parameter #16 ¹	UINT16	

Table 5-42 DR Setup Parameter Data Structure

Notes:

- 1) Changing any of these Data Recorder setup registers will reset the Data Recorder.
- 2) **Recording Offset** can be used to delay the recording by a fixed amount of time from the **Recording Interval**. For example, if the **Recording Interval** is set to 3600 (hourly) and the **Recording Offset** is set to 300 (5 minutes), the recording will take place at 5 minutes after the hour every hour, i.e. 00:05, 01:05, 02:05...etc. The value of the **Recording Offset** parameter should be less than the **Recording Interval** parameter.

5.12 TOU Setup

5.12.1 Basic

Register	Property	Description	Format	Range/Option
7000	RO	Current Tariff ¹	UINT16	0=T1, 1=T2, 2=T3, 3=T4 4=T5, 5=T6, 6=T7, 7=T8
7001	RO	Current Season	UINT16	0 to 11 (Season #1 to #12)
7002	RO	Current Period	UINT16	0 to 11 (Period #1 to #12)
7003	RO	Current Daily Profile No.	UINT16	0 to 19 (Daily Profile #1 to #20)
7004	RO	Current Day Type	UINT16	0=Weekday1 1=Weekday2 2=Weekday3 3=Alternate Day
7005	RO	Current TOU No.	UINT16	0=TOU #1 1=TOU #2
7006	RW	TOU Switch Time	UINT32	See Note (1)
7008	WO	Switch TOU Manually	UINT16	Write 0xFF00 to manually switch the TOU schedules
7009	RW	Sunday Setup	UINT16	0=Weekday1* 1=Weekday2 2=Weekday3
7010	RW	Monday Setup	UINT16	
7011	RW	Tuesday Setup	UINT16	
7012	RW	Wednesday Setup	UINT16	
7013	RW	Thursday Setup	UINT16	
7014	RW	Friday Setup	UINT16	
7015	RW	Saturday Setup	UINT16	

Table 5-43 TOU Basic Setup

Notes:

- 1) If DI1 is not programmed as a **Tariff Switch**, the TOU will function based on the TOU Schedule. If at least one DI (DI1) is programmed as a **Tariff Switch**, the TOU Schedule will no longer be used and the Tariff switching will be based on the status of the DIs.
- 2) The following table illustrates the data structure for the TOU Switch Time. For example, 0x1003140C indicates a switch time of 12:00pm on March 20th, 2016. Writing 0xFFFFFFFF to this register disables the switching between TOU Schedule.

Byte 3	Byte 2	Byte 1	Byte 0
Year-2000 (0-37)	Month (1-12)	Day (1-31)	Hour (00-23)

Table 5-44 TOU Switch Time Format

5.12.2 Season

The PMC-53A has two sets of Season setup parameters, one for each TOU. The Base Addresses for the two sets are 7100 and 8100, respectively, where the Register Address = Base Address + Offset. For example, the register address for TOU #1's Season #2's Start Date is $7100+4 = 7104$.

Offset	Property	Description	Format	Range/Default*

Table 5-45 Season Setup

Notes:

- 1) **Start Date** for Season #1 is Jan. 1st and cannot be modified.
- 2) Setting a Season's **Start Date** as 0xFFFF terminates the TOU's Season settings. All subsequent Seasons' setup parameters will be ignored since the previous Season's duration is from its **Start Date** to the end of the year.
- 3) The **Start Date** of a particular Season must be later than the previous Season's.

5.12.3 Daily Profile

The PMC-53A has two sets of Daily Profile setup parameters, one for each TOU.

Register	Property	Description	Format
7200~7223	RW	Daily Profile #1	See Table 5-48 Daily Profile Data Structure

+23	RW	Period #12 Tariff	UINT16	0=T1, ..., 7=T8

Table 5-48 Daily Profile Data Structure**Notes:**

- 1) **Daily Profile #1's Period #1 Start Time** is always 00:00 and cannot be modified.
- 2) Setting a Period's **Start Time** as 0xFFFF terminates the Daily Profile's settings. All subsequent Daily Profiles' setup parameters will be ignored, and the previous Period's duration is from its **Start Time** to the end of the day.
- 3) The minimum interval of a period is 15 minutes.
- 4) The **Start Time** of a particular Period must be later than the previous Period's .

5.12.4 Alternate Days

Each Alternate Day is assigned a Daily Profile and has a higher priority than Season. If a particular date is set as an Alternate Day, its assigned Daily Profile will override the “normal” Daily Profile for this day according the TOU settings.

The PMC-53A has two sets of Alternate Days setup parameters, one for each TOU. The Base Addresses for the two sets are 7700 and 8700, respectively, where the Register Address = Base Address + Offset. For example, the register address for TOU #2's Alternative Day #2's Date is 8700+3 = 8703.

Offset	Property	Description	Format	Range/Default*
0	RW	Alternate Day #1 Date ¹	UINT32	Table 5-50
2	RW	Alternate Day #1 Daily Profile	UINT16	0* to 19

263	RW	Alternate Day #88 Daily Profile	UINT16	0* to 19
264	RW	Alternate Day #89 Date ¹	UINT32	Table 5-50
266	RW	Alternate Day #89 Daily Profile	UINT16	0* to 19
267	RW	Alternate Day #90 Date ¹	UINT32	Table 5-50
269	RW	Alternate Day #90 Daily Profile	UINT16	0* to 19

Table 5-49 Alternate Days Setup**Notes:**

- 1) The following table illustrates the data structure of the Date register:

Byte 3	Byte 2	Byte 1	Byte 0
Reserved	Year-2000 (0-37)	Month (1-12)	Day (1-31)

Table 5-50 Date Format

When the Year and/or Month are set as **0xFF**, it means the Alternate Day is repetitive by year and/or month, i.e. the same day of every year or every month is an Alternate Day.

5.13 Time

There are two sets of Time registers supported by the PMC-53A – Year / Month / Day / Hour / Minute / Second (Registers # 60000 to 60002) and UNIX Time (Register # 60004). When sending time to the PMC-53A over Modbus communications, care should be taken to only write one of the two Time register sets. All registers within a Time register set must be written in a single transaction. If registers 60000 to 60004 are being written to at the same time, both Time register sets will be updated to reflect the new time specified in the UNIX Time register set (60004) and the time specified in registers 60000-60002 will be ignored. Writing to the Millisecond register (60003) is optional during a Time Set operation. When broadcasting time, the function code must be set to 0x10 (Pre-set Multiple Registers). Incorrect date or time values will be rejected by the meter. In addition, attempting to write a Time value less than Jan 1, 2000 00:00:00 will be rejected.

Register		Property	Description	Format	Note
60000	9000	RW	High-order Byte: Year	UINT16	0-37 (Year-2000)
			Low-order Byte: Month		1 to 12
60001	9001	RW	High-order Byte: Day	UINT16	1 to 31
			Low-order Byte: Hour		0 to 23
60002	9002	RW	High-order Byte: Minute	UINT16	0 to 59
			Low-order Byte: Second		0 to 59
60003	9003	RW	Millisecond	UINT16	0 to 999
60004 ~ 60005	9004 ~ 9005	RW	UNIX Time	UINT32	0x386D4380 to 0x 7FE8177F The corresponding time is 2000.01.01 00:00:00 to 2037.12.31 23:59:59 (GMT 0:00 Time Zone)

Table 5-51 Time Registers**5.14 Remote Control**

The DO Control registers are implemented as both “Write-Only” Modbus Coil Registers (0XXXXX) and Modbus Holding Registers (4XXXXX), which can be controlled with the Force Single Coil command (Function Code 0x05) or the Preset Multiple Hold Registers (Function Code 0x10). The PMC-53A does not support the Read Coils command (Function Code 0x01) because DO Control registers are “Write-Only”. The DO Status register 0098 should be read instead to determine the current DO status.

The PMC-53A adopts the ARM before EXECUTE operation for the remote control of its Digital Outputs

if this function is enabled through the **Arm Before Execute Enable** Setup register (6032), which is disabled by default. Before executing an OPEN or CLOSE command on a Digital Output, it must be “Armed” first. This is achieved by writing the value 0xFF00 to the appropriate register to “Arm” a particular DO operation. The DO will be “Disarmed” automatically if an “Execute” command is not received within 15 seconds after it has been “Armed”. If an “Execute” command is received without first having received an “Arm” command, the meter ignores the “Execute” command and returns the 0x04 exception code.

Register	Property	Description	Format	Note
9100	WO	Arm DO1 Close	UINT16	
9101	WO	Execute DO1 Close	UINT16	
9102	WO	Arm DO1 Open	UINT16

9623	WO	Clear Data Recorder #5 Log		
9624	WO	Clear All Data Recorder Log		

Table 5-53 Clear Control

Notes:

- 1) Writing 0xFF00 to the **Clear Historical Monthly Energy Log** register to clear the Monthly Energy Log of the last 1 to 12 months, excluding the Monthly Energy Log for the Present Month.

- 2) Writing 0xFF00 to the **Clear All Energy Registers** register to clear the 3-Ø Total and Per-Phase energy registers.
- 3) Writing 0xFF00 to the **Clear Present Monthly Energy Log** register to clear the Monthly Energy Log of the Present Month.
- 4) Writing 0xFF00 to the **Clear Peak Demand of This Month** register to clear Peak Demand Log of This Month (Since Last Reset) when the **Self-Read Time** register is set for automatic Self-Read operation. The Peak Demand of Last Month will not be cleared. If the **Self-Read Time** register is set for manual operation with a register value of 0xFFFF, the Peak Demand of This Month (Since Last Reset) will be transferred to the Peak Demand of Last Month (Before Last Reset) and then cleared.
- 5) Writing 0xFF00 to the **Clear All Demand** register to clear all Demand registers and logs, including Real-time Present Demand, Peak Demand Log of This Month (Since Last Reset) and Last Month (Before Last Reset).
- 6) Writing 0xFF00 to the **Clear Max./Min. Log of This Month** register to clear the Max./Min. log of This Month (Since Last Reset) when the **Self-Read Time** register is set for automatic Self-Read operation. The Max./Min. log of Last Month will not be cleared. If the **Self-Read Time** register is set for manual operation with a register value of 0xFFFF, the Max./Min. log of This Month (Since Last Reset) will be transferred to the Max./Min. log of Last Month (Before Last Reset) and then cleared.
- 7) Writing 0xFF00 to the **Clear All Max./Min. Log** register to clear both the Max./Min Log of This Month (Since Last Reset) and the Max./Min. Log of Last Month (Before Last Reset).
- 8) Writing 0xFF00 to the **Clear All Data** register to perform the Clear operation for the actions specified in registers # 9600 to 9607, registers # 9609 to # 9615, registers # 9618 to 9624 and Daily and Monthly Freeze Logs.

5.16 Meter Information

Register	Property	Description	Format	Note
60200~60219	9800~9819	RO	Meter model ¹	UINT16 See Note 1)
60220	9820	RO	Firmware Version	UINT16 e.g. 10000 shows the version is V1.00.00
60221	9821	RO	Protocol Version	UINT16 e.g. 10 shows the version is V1.0
60222	9822	RO	Firmware Update Date: Year-2000	UINT16
60223	9823	RO	Firmware Update Date: Month	UINT16 e.g. 140110 means January 10, 2014
60224	9824	RO	Firmware Update Date: Day	UINT16
60225	9825	RO	Serial Number	UINT32 e.g. 1701030100 means the 100 th PEM353 that was manufactured on January 3 rd , 2017
60227	9827	RO	Reserved	UINT16
60228	9828	RO	Reserved	UINT16
60229	9829	RO	Feature Code	UINT16 Bit 0 to Bit 2 (Expansion A): 000=None 001=RS485 010=I4 011=SPI Bit 3 to Bit 5 (Expansion B): 000=None 001=1xAI + 1xAO 010=2xDI + 2xDO 011=2xRTD 100=2xDI + 2x SS Pulse Output 101=Reserved Bit 6 (Flash): 0=Disabled 1=Enabled Bit 8 to Bit 7 (Basic Function): 00=4xDI + 2xDO 01=None 10=4xDI + 2 x SS Pulse

				Output
Bit 15 to Bit 16: Reserved				

* Available in Firmware V1.00.04 or later

Table 5-54 Meter Information

Notes:

- 1) The Meter Model appears from registers 60200 to 60219 and contains the ASCII encoding of the string “PMC-53A” as shown in the following table.

Register	Value(Hex)	ASCII
60200	0x50	P
60201	0x4D	M
60202	0x43	C
60203	0x2D	-
60204	0x35	5
60205	0x33	3
60206	0x41	A
60207-60219	0x20	Null

Appendix C BACNet MSTP Implementation

1) Basic Information

The PMC-53A with the Firmware V1.00.03 or later supports the BACnet MS/TP protocol and can easily be connected to a BACnet MS/TP network using an off-the shelf BACnet router. The PMC-53A provides four types of BACnet objects. Standard Protocol Implementation Conformance Statement (PICS) as illustrated in table below describes the required characteristics of the BACnet implementation.

Item	Description
Date	March 20, 2017
Vendor Name	CET
Model Name	PMC-53A
Applications Software Version	1.00.03
Firmware Revision	1.0
Protocol Version	1
Protocol Revision	7
Description	Intelligent Multifunction Meter
Standardized Device	BACnet Smart Actuator (B-SA)
Interoperability Building Blocks supported	DS-RP-B, DS-RPM-B, DS-WP-B, DM-DOB-B, DM-TS-B, DM-DDB-B
Segmentation Capability	Not Supported
Data Link Layer Options	MS/TP Master, Baud rate(s): 1200, 2400, 4800, 9600, 19200, 38400
Device Address Binding	None
Networking Options	None
Character Sets Support	ANSI X3.4

2) Device Objects

- **Optional Properties Supported:** Description, Local_Time, Local_Date, Location
- **Writable Properties:** Object_Identifier, Number_Of_APDU_Reries, APDU_Timeout, System_Status, Object_Name, Location, Description, Max_Master, Max_Info_Frame, Local_Time, Local_Date
- **Property Range Restrictions:** Object_Identifier - valid range is between 0 and 4194302; Object_Name - limited to 32 characters; Location - limited to 64 characters; Description - limited to 64 characters; Max_Master – valid range is between 1 and 127.

The following table illustrates the Device Objects on the PMC-53A:

Property*	Description	Range/Values	Default
R/W	Object_Identifier	0 to 4194302	26001
R/W	Object_Name	Up to 32 characters	Simple Server
R/W	System_Status	Operational (0)	
R	Object_Type	Device (8)	
R	Vendor_Name	CET	
R/W	Vendor_Identifier	593	
R	Model_Name	PMC-53A	
R	Firmware_Revision	1	
R	Application_Software_Version	1.00.03	
R/W	Location	Up to 64 characters	LOCAL
R/W	Description	Up to 64 characters	Intelligent Multifunction Meter
R	Protocol_Version	1	
R	Protocol_Revision	7	
R	Protocol_Service_Supported ¹	Please see notes below	
R	Protocol_Object_Types_Supported ²	Please see notes below	
R	Object_List	Please refer to sections 3) to 6)	
R	Max_APDU_Length_Accepted	480	
R	Segmentation	NO_SEGMENTATION	

		(3)	
R/W	APDU_Timeout	0~65535	3000
R/W	Number_Of_APDU_Retries	0~255	3
R/W	Max_Master	1 to 127	127
R/W	Max_Info_Frame	1	
R	Device_Address_Binding	{}	
R	Database_Revision	0	
R	Local_Time	Configuration by timing	12:00:00:00
R	Local_Date	Configuration by timing	2016.07.01

* R = Read Only; R/W = Read/Write

Notes:

- 1) Supported services:
 - ReadProperty
 - ReadPropertyMultiple
 - WriteProperty
 - TimeSynchronization
 - Who-Has
 - Who-Is, I-Am, I-Have
- 2) Supported object types:
 - Analog-Input
 - Analog-Value
 - Binary-Input
 - Binary-Output
 - Device

3) Analog Input Objects (PMC-53A's Real-Time Parameters)

Optional Properties Supported: Description, Reliability

Use the Present_Value property of the Analog_Input objects for all read-only numeric variables in PMC-53A. These objects support the Description and Reliability optional properties and all required Analog_Input object properties. None of them are writable. The values that are not instantaneous (i.e. Accumulated Energy, Peak Demand) are non-volatile.

AI 0526	Interval kWh Import	R		
AI 0528	Interval kWh Export	R		
AI 0530	Interval kvarh Import*	R	kvarh	0 to 99999999.9

AI 0532	Interval kvarh Export*	R		
AI 0534	Interval kVAh*	R	kWh	
AI 1200	DI #1 Counter	R		
AI 1202	DI #2 Counter	R		
AI 1204	DI #3 Counter	R		
AI 1206	DI #4 Counter	R		
AI 1208	DI #5 Counter	R		
AI 1210	DI #6 Counter	R	-	0 to 999,999,999

*There are no unit types for kvarh and kVAh in BACnet so the return values are in unit of kWh.

Notes:

- 1) When the **Wiring Mode** is 3P3W, the per phase line-to-neutral voltages, kWs, kvars, kVAs and PFs have no meaning, and their registers are reserved.
- 2) Uan/Ubn/Ucn THD = Uab/Ubc/Uca THD in 3P3W Wiring Mode and represent the harmonics of the line voltages.
- 3) Uan/Ubn/Ucn Angle = Uab/Ubc/Uca Angle in 3P3W Wiring Mode and represent the phase angles of the line voltages.

4) Analog Value Objects (PMC-53A's Basic Setup Registers)

Optional Properties Supported: Description, Relinquish_Default, Priority_Array

Writable Properties: Present_Value, Out_Of_Service, Units, Relinquish_Default

Use the Present Value property of the Analog Value object for some writable variables in the meter other than those used specifically for BACnet configuration or Time Synchronization. Values are checked when written, and errors are returned for invalid entries. The table below describes how the Setup Registers of the PMC-53A are represented in BACnet, their valid ranges, their defaults as well as how they are used. PMC-53A supports the Description, Relinquish_Default and Priority_Array optional properties. Writable properties include Present_Value, Out_Of_Service, Units and Relinquish_Default, but Units are not non-volatile after modification.

Register	Description	Property	Unit/ Range	Default/Note
AV 6000	PT Primary High#	R/W	0 to 1000 kV	0
AV 6001	PT Primary Low#	R/W	1 to 999 V	100
AV 6002	PT Secondary#	R/W	1 to 690	100
AV 6004	CT Primary	R/W	1 to 30000	5
AV 6006	CT Secondary	R/W	1 to 5	5
AV 6012	I4 Primary	R/W	1 to 30000	5
AV 6014	I4 Secondary	R/W	1 to 5	5
AV 6020	Wiring Mode	R/W	0 = DEMO 1 = 1P2W L-N 2 = 1P2W L-L, 3 = 1P3W L-L-N 4 = 3P3W, 5 = 3P4W	5
AV 6021	PF Convention	R/W	0 = IEC, 1 = IEEE, 2 = -IEEE	0
AV 6022	kVA Calculation	R/W	0 = Vector, 1 = Scalar	0
AV 6028	THD Calculation	R/W	0 = THDf, 1 = THDr	0
AV 6029	Demand Period	R/W	1 to 60 min	15
AV 6030	Number of Sliding Windows	R/W	1 to 15	1
AV 6047	Interval Energy Period	R/W	5 to 60 min	60
AV 9603	Clear Present Peak Demand	W	65280	Default = 0 Writing "0xFF00" to the register to execute the described action.
AV 9601	Clear Energy	W	65280	
AV 9610	Clear DI #1 Counter	W	65280	
AV 9611	Clear DI #2 Counter	W	65280	
AV 9612	Clear DI #3 Counter	W	65280	
AV 9613	Clear DI #4 Counter	W	65280	
AV 9614	Clear DI #5 Counter	W	65280	

AV 9615	Clear DI #6 Counter	W	65280
#PT Ratio × CT Ratio × Rated Phase Voltage Input × Rated Current Input × $\sqrt{3}$ must be less than 790,000,000.			

5) Binary Input Objects (PMC-53A's Digital Inputs)

Optional Properties Supported: Description, Reliability

Use the Present_Value properties of the Binary_Input objects as alerts for conditions of potential concern regarding system measurements. These objects support the Description and Reliability optional properties and all required Binary_Input object properties. None of them are writable.

Register	Description	Property	Note
B10	DI 1	R	0 = Inactive, 1 = Active
B11	DI 2	R	0 = Inactive, 1 = Active
B12	DI 3	R	0 = Inactive, 1 = Active
B13	DI 4	R	0 = Inactive, 1 = Active
B14	DI 5	R	0 = Inactive, 1 = Active
B15	DI 6	R	0 = Inactive, 1 = Active

6) Binary Output Objects (PMC-53A's Digital Outputs)

Optional Properties Supported: Inactive_Text, Active_Text

Use the Present_Value property of the Binary_Output objects as alerts for DO conditions. Reading Binary_Output objects have the highest priority. PMC-53A supports Inactive_Text, Active_Text optional properties and all required Binary_Output object properties. Present_Value, Out_Of_Service and Polarity properties can be written, but these are non-volatile after modification. The Present_Value can only be written when the Out_Of_Service is true to change the state of the Digital Output and will be written as W when the Out_Of_Service is false.

Register	Description	Property	Note
BO0	DO 1	R/W	0 = Inactive, 1 = Active
BO1	DO 2	R/W	0 = Inactive, 1 = Active
BO2	DO 3	R/W	0 = Inactive, 1 = Active
BO3	DO 4	R/W	0 = Inactive, 1 = Active

7) Additional Front Panel Setup Parameters for BACnet MS/TP

The following BACnet MS/TP setup parameters should be configured via the PMC-53A's Front Panel before connecting the PMC-53A to a BACnet MS/TP network.

Parameters	Description	Option/Range	Default
MAC	MS/TP ID [^]	0 to 127	100
INST	Object Identifier [#]	0 to 4194302	26001
MAXMAS	Maximum Number of Master	0 to 127	127
LOCK	Disable communication	YES/NO	NO
BAUD	Baud rate	1200/2400/4800/9600/19200/38400	9600
CONFIG	Comm. Port Configuration	8N1/8E1/8O1/8N2/8E2/8O2	8E1

[^]The MS/TP ID is similar to the Modbus unit ID conceptually

[#]The Object Identifier is similar to the IP address of an Ethernet network conceptually and is required to be unique within the entire BACnet network

Appendix D N2 Implementation

The PMC-53A with Firmware V1.00.03 or later supports the JCI's Metasys N2 protocol, in addition to BACnet MS/TP, which allows it to connect directly to the Metasys N2 Network. The user can select the desired protocol via the Front Panel's **COMM** menu. The N2 protocol assigns key analog parameters to ADF points. The Command Register with override capability is used to reset groups of parameters held in the device.

Before integrating the PMC-53A into a Metasys N2 Network, please make sure that all N2 devices are configured, started and running properly. No more than 32 N2 devices should be connected to an NCM's N2 Bus segment, and no more than 100 N2 devices when repeaters are used. There are no additional communication setup parameters for the Metasys N2 protocol.

Item	Description
Device Address	1-247 (100*)
Baud Rate	1200/2400/4800/9600*/19200/38400
Interface	RS485 Half Duplex
Word Length	8
Stop Bits	1*/2
Parity	Even*/Odd/None

* Default

1) Supported N2 Commands

Command	PMC-53A's Response
Identify Device Type	VND
Synchronization Time	Supported
Poll Without Ack	Always respond with No COS Poll Response
Poll With Ack	Always respond with No COS Poll Response
Read Analog Input	Supported
Override Analog Input	Only used to override the Command Register. When an unsupported command is received, the PMC-53A will respond with the Undefined Command Error Code 0x01.

2) Map Table

AI Point	PMC-53A		AI Point	PMC-53A	
	Parameter	Unit		Parameter	Unit
1	Uan ¹	V	47	kW Total Peak Demand	kW

46	Ic Demand				

Notes:

- 1) When the **Wiring Mode** is 3P3W, the per phase line-to-neutral voltages, kWs, kvars, kVAs and PFs have no meaning, and their ADF points are reserved.
- 2) Uan/Ubn/Ucn THD = Uab/Ubc/Uca THD in 3P3W Wiring Mode and represent the harmonics of the line voltages.
- 3) Uan/Ubn/Ucn Angle = Uab/Ubc/Uca Angle in 3P3W Wiring Mode and represent the phase angles of the line voltages.
- 4) Interval Energy Period (EN Period) can be modified via the Front Panel.
- 5) The Command register, ADF point 91, is used to reset groups of accumulated values held in the device. The following table illustrates the override values written to the Command register and their corresponding actions. It is not essential to release the Command Register for the reset to operate. The last Command (156003) is reserved, and the device will respond with 0 if received.

Override Value for Command Register	Action
156001	All Energy values
156002	All Demand values
156003	Reserved

Appendix E DNP Profile

This section contains the DNP Device Profile Information according to the standard format defined in the DNP 3.0 Subset Definitions Document and should provide a complete application configuration guide.

DNP V3.0

Application Layer's Function and Qualifier Code Description

Function Code			Qualifier Code		
Code (dec)	Description	PMC-53A	Code (hex)	Description	PMC-53A
0	Confirm		0x00	8-bit start/stop indices	✓
1	Read	✓	0x01	16-bit start/stop indices	
2	Write	✓	0x06	Request for all points	✓
3	Select	✓	0x07	Single field index, 8-bit format	✓
4	Operate	✓	0x08	Single field index, 16-bit format	
5	Direct Operate With Acknowledge	✓	0x17	Control point	
6	Direct Operate Without Acknowledge		0x28	Control point	✓
7	Freeze with Acknowledge				
8	Immediate Freeze - No Acknowledge				
9	Freeze and Clear with Acknowledge				
10	Freeze and Clear - No Acknowledge				
13	Cold Restart	✓			
20	Enable Spontaneous Messages	✓			
21	Disable Spontaneous Messages	✓			
22	Assign Classes				
23	Delay Measurement				
129	Solicited Response	✓			
130	Unsolicited Response				

Data Link Layer

The PMC-53A can be assigned a device address between 0 and 65519. After device restart, Function Code 0 (Reset of Remote Link) must be executed to enable DNP communication. The following table describes which Data Link Layer functions are supported.

Request			Response		
Func. Code	Description	PMC-53A	Func. Code	Description	PMC-53A
0	Reset of Remote Link	✓	0	ACK - Positive Acknowledgement	✓
1	Reset of User Process		1	NACK - Message Not Accepted, Link Busy	✓
2	Test Function for Link		2	Not Used	
3	User Data		3	Not Used	
4	Unconfirmed User Data	✓	4	Not Used	
5	Not Used		5	Not Used	
6	Not Used		6	Not Used	
7	Not Used		7	Not Used	
8	Not Used		8	Not Used	
9	Request Link Status	✓	9	Not Used	
10	Not Used		10	Not Used	
11	Not Used		11	Status of Link	✓
12	Not Used		12	Not Used	
13	Cold Restart	✓	13	Respond Object 52:2	✓
14	Not Used		14	Link Service Not Functioning	
15	Not Used		15	Link Service Not Used or Implemented	

Physical Layer

The Port 1 RS-485 is designed to support the DNP 3.0 protocol.

Port Configuration	Description	Notes
Port Name	COM1	
Baud Rate	1200/2400/4800/9600*/19200/38400	
Parity	8E1*/8O1/8N1/8E2/8O2/8N2	Default*

DNP Point Map

Object 1 - Binary Input Status with Flags (Included in Class 0 responses)

Read with Object 1, Variation 2, and Qualifier 6.

Point	Description	Format	Range
0	DI1 ¹	UINT8	Bit Flags
1	DI2 ¹	UINT8	Bit Flags
2	DI3 ¹	UINT8	Bit Flags
3	DI4 ¹	UINT8	Bit Flags
4	DI5 ^{1,2}	UINT8	Bit Flags
5	DI6 ^{1,2}	UINT8	Bit Flags

Supported Flags:

Bit 0 (ONLINE): 0=Offline, 1=Online

Bit 7 (STATE): 0=Off, 1=On

Notes:

- 1) If the Device Model does not support DI, the Bit 0 and Bit 7 for the bytes of all DI status above would be set to "0".
- 2) If 4xDIs are supported on the Device Model, the Bit 0 and Bit 7 in bytes for DI5 and DI6 status would be set to "0".

Object 10 - Binary Output States (Included in Class 0 responses)

Read with Object 10, Variation 2, and Qualifier 6.

Point	Description	Format	Range
0	Clear Present Energy Log	UINT8	Always 0
1	Clear All Energy Registers	UINT8	Always 0
2	Clear Present Monthly Energy Log	UINT8	Always 0
3	Clear Peak Demand of This Month (Since Last Reset)	UINT8	Always 0
4	Clear All Demand Registers	UINT8	Always 0
5	Clear Max/Min Logs of This Month (Since Last Reset)	UINT8	Always 0
6	Clear All Max./Min. Log	UINT8	Always 0
7	Clear Device Operating Time	UINT8	Always 0
8	Clear All Data	UINT8	Always 0
9	Clear DI1 Pulse Counter	UINT8	Always 0
10	Clear DI2 Pulse Counter	UINT8	Always 0
11	Clear DI3 Pulse Counter	UINT8	Always 0
12	Clear DI4 Pulse Counter	UINT8	Always 0
13	Clear DI5 Pulse Counter	UINT8	Always 0
14	Clear DI6 Pulse Counter	UINT8	Always 0
15	Clear All Pulse Counters	UINT8	Always 0
16	DO1 ¹	UINT8	Bit Flags
17	DO2 ¹	UINT8	Bit Flags
18	DO3 ^{1,2}	UINT8	Bit Flags
19	DO4 ^{1,2}	UINT8	Bit Flags
20-29	Reserved		
30-43	Wiring Diagnostics Status	UINT8	Bit Flags

Notes:

- 1) If the Device Model does not support DO, the Bit 0 and Bit 7 for the bytes of all DO status above would be set to "0".
- 2) If 2xDOs are supported on the Device Model, the Bit 0 and Bit 7 in bytes for DO3 and DO4 status would be set to "0".
- 3) The following table shows the details of Point 30-43.

No.	Event
30	Frequency is out of range (45 to 65Hz) (3P4W or 3P3W)
31	Any phase voltage < 10% of PT Primary (Register 6000) (3P4W only)
32	Any phase current < 10% of CT Primary (Register 6004) (3P4W or 3P3W)
33	RTD 1 broken (RTD Input option only)
34	RTD 2 broken (RTD Input option only)
	Voltage Phase Reversal (3P4W only)
	Current Phase Reversal (3P4W or 3P3W)
	Negative kW Total may be abnormal (3P4W or 3P3W)
	Negative kWa is may be abnormal (3P4W only)
	Negative kWB may be abnormal (3P4W only)
	Negative kWc may be abnormal (3P4W only)
	CTa polarity may be reversed (3P4W only)
	CTb polarity may be reversed (3P4W only)

43	CTc polarity may be reversed (3P4W only)
----	------------------------------------------

Supported Flags:

Bit 0 (ONLINE):

0 = Offline, which represents that the control of the Output could not be implemented.

1 = Online, which represents that the Output works properly, once control request has been sent, the command could be correctly implemented.

Bit 7 (STATE): 0=Off, 1=On

Object 12 - Control Relay Outputs

Responds to Function Codes: 03 (Select), 04 (Operate) and 05 (Direct Operate), Variation 1, Qualifier 0x28, with a Count of 1 only. Only one control object at a time may be specified.

Point	Description	Format	Range
0	Clear Present Energy Log	UINT8	N/A
1	Clear All Energy Registers	UINT8	N/A
2	Clear Present Monthly Energy Log	UINT8	N/A
3	Clear Peak Demand of This Month (Since Last Reset)	UINT8	N/A
4	Clear All Demand Registers	UINT8	N/A
5	Clear Max/Min Logs of This Month (Since Last Reset)	UINT8	N/A
6	Clear All Max./Min. Log	UINT8	N/A
7	Clear Device Operating Time	UINT8	N/A
8	Clear All Data	UINT8	N/A
9	Clear DI1 Pulse Counter	UINT8	N/A
10	Clear DI2 Pulse Counter	UINT8	N/A
11	Clear DI3 Pulse Counter	UINT8	N/A
12	Clear DI4 Pulse Counter	UINT8	N/A
13	Clear DI5 Pulse Counter	UINT8	N/A
14	Clear DI6 Pulse Counter	UINT8	N/A
15	Clear All Pulse Counters	UINT8	N/A
16	DO1	UINT8	Bit Flags
17	DO2	UINT8	Bit Flags
18	DO3	UINT8	Bit Flags
19	DO4	UINT8	Bit Flags

Please refer to the **DNP V3.00 Data Object Library** document for a detailed description of the Object Coding format for the Control Relay Output Block as well as the meanings of the returned Status.

Object 20 - 32-BIT Binary Counters - Primary Readings (Included in Class 0 responses)

Read with Object 20, Variation 5, and Qualifier 6.

Point	Description	Format	Unit	Scale	Range
0	kWh Import	INT32	kWh		
1	kWh Export	INT32	kWh		
2	kWh Net	INT32	kWh		
3	kWh Total	INT32	kWh		
4	kvarh Import	INT32	kvarh		
5	kvarh Export	INT32	kvarh		
6	kvarh Net	INT32	kvarh		
7	kvarh Total	INT32	kvarh		
8	kVAh	INT32	kVAh		
9	kvarh Q1	INT32	kvarh		
10	kvarh Q2	INT32	kvarh		
11	kvarh Q3	INT32	kvarh		
12	kvarh Q4	INT32	kvarh		
13	Interval kWh Import	INT32	kWh		
14	Interval kWh Export	INT32	kWh		
15	Interval kvarh Import	INT32	kvarh		
16	Interval kvarh Export	INT32	kvarh		
17	Interval kVAh	INT32	kVAh		
18	DI1 Pulse Counter ¹	UINT32	1		
19	DI2 Pulse Counter ¹	UINT32	1		
20	DI3 Pulse Counter ¹	UINT32	1		
21	DI4 Pulse Counter ¹	UINT32	1		

22	DI5 Pulse Counter ^{1,2}	UINT32	1		
23	DI6 Pulse Counter ^{1,2}	UINT32	1		

Notes:

- 1) If the Device Model does not support DI, all DI Pulse Counters would be set to "0".
- 2) If 4xDI are supported on the Device Model, DI5 and DI6 Pulse Counter would be set to "0".

Object 20 - 16-BIT Binary Counters - Primary Readings (Included in Class 0 responses)

Read with Object 20, Variation 6, and Qualifier 6.

Point	Description	Format	Range
0	Scale for Energy and Operating Time	UINT16	10
1	Scale for Current, PF, I Seq., I Fund., and I Demand	UINT16	1000
2	Scale for U, Freq, Phase Angle, RTD, U Fund., U Seq., THD, TDD, K Factor, Crest-factor and Unbalance	UINT16	100
3	Scale for AI, AO, Power and Power Demand	UINT16	1
4	Firmware Version ¹	UINT16	0-65535
5	Feature Code ²	UINT16	0-65535

Notes:

- 1) The read-out value 10000 represents the Version is V1.00.00.
- 2) The following table illustrates the details of Feature Code. Bit 6 and Bit 9 to Bit 15 for the Byte are reserved. Points for I4, AI Scaled, RTD1, RTD2 and AO in Object 30 are only meaningful if the meter is equipped with the corresponding option.

Bit 7 to Bit 8 (Basic I/O Function)	Bit 3 to Bit 5 (Expansion Module B)	Bit 0 to Bit 2 (Expansion Module A)
00=4xDI+2xDO	000=None	000=None
01=None	001=1xAI + 1xAO	001=RS485
10=4xDI+2xSS Pulse Output	010=2xDI + 2xDO 011=2xRTD 100=2xDI + 2x SS Pulse Output 101=Reserved	010=I4 011=SPI

Object 30 - Analog Inputs Primary Readings (Included in Class 0 responses)

Read with Object 30, Variation 3, and Qualifier 6.

Notes:

- 1) When the Wiring Mode is 1P2W L-N or 1P2W L-L, the L2 and L3 phase voltages and currents have no meaning, and their registers are reserved.
- 2) When the Wiring Mode is 1P2W L-N, 1P2W L-L or 1P3W, the Sequence Components U1/I1, U2/I2 and U0/I0 have no meaning and their registers are reserved.

Object 40 - Analog Output Status Objects

Read with Object 40, Variation 2, and Qualifier 6.

Point	Property	Description	Format	Range
0	RO	Class 0 Points	UINT16	0-65535

Object 41 - Analog Output Command Objects

Responds to Function Codes: 03 (Select), 04 (Operate) and 05 (Direct Operate), Variation 2, Qualifier 0x28, with a Count of 1 only.

Point	Property	Description	Format	Range
0	WO	Class 0 Points	UINT16	0-65535

Note: The following table illustrates the details of Bit Values for Class 0 Points.

Bit Point	Descriptions	Value
Bit 0	Object 1 - Binary Input Status Included in Class 0 responses?	0=No, 1=Yes (default)
Bit 1	Object 10 - Binary Output States Included in Class 0 responses?	0=No, 1=Yes (default)
Bit 2	Object 20 - 32 BIT Binary Counters Included in Class 0 responses?	0=No, 1=Yes (default)
Bit 3	Object 20 - 16 BIT Binary Counters Included in Class 0 responses?	0=No, 1=Yes (default)
Bit 4	Object 30 -Analog Inputs Included in Class 0 responses?	0=No, 1=Yes (default)
Bit 5	Object 40 - Analog Output Status Included in Class 0 responses?	0=No, 1=Yes (default)
Bit 6- Bit 15	Reserved	

Object 50 - Date and Time

Read and Write function is supported for this object, which occupies 6 bytes for the device's time. The time shows the number of UNIX milliseconds since 00:00:00 January 1, 1970, calculated by UNIX seconds*1000 + milliseconds.

Object 60 - Class Objects

Read with Function Code 1, Variation 1, and Qualifier 6. Only Class 0 polls are supported.

Object 80 - Internal Indicator

This is a Write Only function. Clear the Restart Bit with Function Code 2, Variation 1, Qualifier 0.

Point	Description	Format	Range
7	Device Restart	UINT8	0-1

Appendix F Technical Specifications

Voltage Inputs (V1, V2, V3, VN)	
Standard Un	400VLN/690VLL
Range	10V to 1.2Un
Overload	1.2xUn continuous, 2xUn for 1s
Burden	<0.02VA per phase
Measurement Category	CAT III up to 600VLL
Frequency	45-65Hz
Current Inputs (I11, I12, I21, I22, I31, I32)	
Standard In=5A/1A Auto-scale	Class 0.5S for 5A and Class 1 for 1A
Optional In=1A	Class 0.5S
Range	0.1% to 200% In
Starting Current	0.1% In
Overload	2xIn continuous, 20xIn for 1s
Measurement Category	CAT III up to 600VLL
Burden	<0.15VA per phase
Optional I4 Input (I41, I42)	
In	5A (5A/1A Auto-Scale)
Range	0.1% to 120% In
Starting Current	0.1% In
Power Supply (L+, N-, GND)	
Standard	95-250VAC/DC, ±10%, 47-440Hz
Optional	20-60VDC
Optional	95-480VAC/DC, ±10%, 47-440Hz
Burden	<2W
Overvoltage Category	CAT III up to 300VLN
Digital Inputs (DI1, DI2, DI3, DI4, DIC)	
Type	Dry contact, 24VDC internally wetted
Sampling	1000Hz
Hysteresis	1ms minimum
Digital Outputs (DO11, DO12, DO21, DO22)	
Type	Form A Mechanical Relay
Loading	5A @ 250VAC or 30VDC
Pulse Outputs (kWh, kvarh)	
Type	Form A Solid State Relay
Isolation	Optical
Max. Load Voltage	80V
Max. Forward Current	50mA
Installation Torque	
Current Inputs	1.3 N.m
Power Supply, Voltage Inputs, RS485 and I/O	0.5 N.m
Environmental Conditions	
Operating Temp.	-25°C to 70°C
Storage Temp.	-40°C to 85°C
Humidity	5% to 95% non-condensing
Atmospheric Pressure	70 kPa to 106 kPa
Mechanical Characteristics	
Panel Cutout	92x92 mm (3.62"x3.62")
Unit Dimensions	96x96x88 mm
IP Rating	65

Accuracy

Parameters	Accuracy	Resolution
Voltage	±0.2% Reading + 0.05% F.S.	0.001V
Current	±0.2% Reading + 0.05% F.S.	0.001A
I4 (measurement)	±0.2%	0.001A
kW, kvar, kVA	±0.5% Reading + 0.05% F.S.	0.001k
kWh, kVAh	IEC 62053-22 Class 0.5S	0.1kXh
kvarh	IEC 62053-23 Class 2	0.1kvarh
P.F.	±0.5%	0.001
Frequency	±0.02 Hz	0.01Hz
THD	IEC 61000-4-7 Class B	0.001%
K-Factor	IEC 61000-4-7 Class B	0.001
Phase angles	±1°	0.1°

Radio Disturbances	CISPR 22:2006, Level B
Emission Tests	
Limits and methods of measurement of electromagnetic disturbance characteristics of industrial, scientific and medical (ISM) radio-frequency equipment	EN 55011: 2009 + A1: 2010 (CISPR 11)
Limits and methods of measurement of radio disturbance characteristics of information technology equipment	EN 55022: 2010+AC: 2011 (CISPR 22)
Limits for harmonic current emissions for equipment with rated current ≤16 A	EN 61000-3-2: 2014
Limitation of voltage fluctuations and flicker in low-voltage supply systems for equipment with rated current ≤16 A	EN 61000-3-3: 2013
Emission standard for industrial environments	EN 61000-6-4: 2007+A1: 2011
Testing and measurement techniques - Ring wave immunity test.	EN 61000-4-12: 2006
Radiated Emissions	FCC 47CFR 15.109 Class B
Conducted Emissions	FCC 47CFR 15.107 Class B
Mechanical Tests	
Spring Hammer Test	IEC 62052-11: 2003
Vibration Test	IEC 62052-11: 2003
Shock Test	IEC 62052-11: 2003

Appendix H Ordering Guide

**CET
Electric
Technology**

Version 20200303

Product Code	Description	
PMC-53A Intelligent Multifunction Meter		
	Basic Function	
1	Dot-Matrix LCD, 1xRS-485 with Multiple Protocol, Monthly Energy Log	
2*	Model 1 + Monthly & Daily Freeze Log, Data Recording Log, 4MB Memory	
3*	Model 1 + 4xDI + 2xSS Pulse Output	
A*	Model 1 + 4xDI + 2xRO (Relay Output)	
B*	Model A + Monthly & Daily Freeze Log, Data Recording Log, 4MB Memory	
	Input Current	
5	5A/1A Auto-Scaling (Class 0.5S for 5A and Class 1 for 1A)	
1	1A	
	Input Voltage	
9	400VLN/690VLL	
	Power Supply	
2	95-250 VAC/DC, 47-440Hz	
3	20-60VDC	
4	95-480 VAC/DC, 47-440Hz	
	Frequency	
5	45Hz-65Hz	
	Language	
E	English	
	Expansion A*	
A1	1xRS-485	
A2	I4 (5A/1A Auto-Scaling)	
	Expansion B*	
B1	2xDI + 2xRO (Relay Output)	
B2	2xRTD (PT100 sensors not included)	
B3	1xAI + 1xAO (0/4-20mA)	
B4	2xDI + 2xSS Pulse Output	
PMC-53A	-	1 5 9 2 5 E - -
PMC-53A-15925E (Standard Model)		

* Additional charges apply

1) Model No. with only one Expansion can be written as PMC-53A-15925E-Ax or PMC-53A-15925E-Bx

2) Model No. with both Expansions can be written as PMC-53A-15925E-Ax-Bx

3) Options B1 and B4 for Expansion B are invalid with options 1, and 2 under Basic Function.
